QUALITY AND LEADING INNOVATION

International Scientific Conference

September 18 – 19, 2014

Introduction speeches
Jozef Mihok – president of the Slovak Office of Standards, Metrology and Testing
Kristína Zgodavová – conference founder, Slovak Republic
Michal Tkáč – conference co-founder, dean of the Faculty of Business Economy with seat in Košice, EUBA Slovak Republic
Peter Horňak – dean of the Faculty of Metallurgy, TUKE, Slovak Republic

Key note speeches
Homo Digitalis, Lidmila Fusková, Czech Republic
Konis production data acquisition and management system in Faurecia Kosice, Ľubomír Lengyel, Slovak Republic
Open innovation, quality and knowledge management, Paivi Haapalainen, Finland
Perfect Execution: Supply chain build to customer requirements, Milan Šesták, Slovak Republic
Research and innovation strategy for intelligent specialization of Slovak Republic in the context of technologies and their impact on quality in industry, Peter Magváši, Slovak Republic
Smart Specialization within Regional Renewable Energy Innovations – Case: Ostrobothnia Region in Finland, Josu Takala, Finland
Sweeping Transformation of the Plant Vrchlabí ŠKODA Auto a.s., Ivan Slimak, Jr., Czech Republic
The fourth industrial revolution, Edgar Dietrich, Germany
Quality of life from the perspective of active aging and silver economy, Jozef Burian, Slovakia

Honorary guests speeches
Return to the roots of quality management, Alexander Linczényi, Slovak Republic
Paradigms, milestones, dominants and barriers of quality in Slovakia, Ivan Slimák, Sr., Slovak Republic

Other announced speeches
A generalization of traditional Kano model for customer requirements analysis, Renáta Turisová, Slovak Republic
Application of decision trees for nonconformity prediction of steel plates surface, Matúš Horváth, Slovak Republic
Case study of balanced scorecard use in automotive industry, Anna Nagyová, Andrea Súťovová, Slovak Republic

Cluster potential in Slovak regions in context of business environment’s quality, Viera Kuzmišinová, Peter Kuzmišin, Slovak Republic

Computer aided knowledge discovery and data mining, Renáta Janošcová, Slovak Republic

Creativity and creative climate as a lever for innovation, Šárka Janků, Růžena Petříková, Czech Republic

Design of experiment in truck company, Michal Tkáč, Jr., Slovak Republic

Development of region by utilization of geothermal power plant, Michal Cehlár, Zuzana Jurkasová, Slovak Republic

Dimensional verification of implants make by additive manufacturing technologies, Teodor Tóth, Radovan Hudák, Jozef Živčák, Slovak Republic

Economic indicators of quality and their influence to cost effectiveness, Katarína Teplická, Marcela Pavlíčková, Slovak Republic

Fault Tree Analysis for Brinell hardness measurement method, Jozef Petrik, Peter Blaško, Slovak Republic

Fighting noise is a long distance run, Peter Weiss, Vojtech Mikloš, Slovak Republic

Full commitment of top management in Macedonian high education institutions, Nako Taskov, Elizabeta Mitreva, Julijana Sazdoa, Nikola Dimitrov, Dejan Metodijeski, Republic of Macedonia

GAP analysis of approaches to implementation of management systems, Miroslav Hrnčiar, Slovak Republic

Implementation and certification the quality management system in university, Jozef Habánik, Jaroslav Jambor, Slovak Republic

Implementation of IMS: A Costs Model, Anna Moščáková, Slovak Republic

Innovations through VDL model, Pavel Mikuš

Integrated assessment of buildings quality in the context of sustainable development principles, Mária Kozlovská, Zuzana Struková, Alena Tažiková, Slovak Republic

Integrated cost model for improving the production in companies, Zuzana Hajduová, Slovak Republic

Lesson learned from using interactive training software for Statistical Process Control, Peter Bober, Slovak Republic

Modelling of innovative projects funding SMEs in Slovakia in Horizon 2020, Milan Majerník, Lubica Lešková, Juraj Čorba, Alexander Tarča, Slovak Republic

Modelling of integrated energy management in companies, Milan Majerník, Martin Bosák, Lenka Štofová, Petra Szaraszyová, Slovak Republic

Open Innovation and its utilisation in education, Iveta Korobančová, Slovak Republic

Playing, doing, thinking, learning: Experiences from the applications of the quality management system role play simulation at the university courses, Kristína Zgodavová, Matúš Horváth, Pavol Palfy, Ľubomír Lengyel, Rozmarína Dubovská, Paivi Haappalainen, Aleš Bourek, Slovak Republic, Czech Republic, Finland

Position of the Slovak Republic in the European Union from the perspective of the Europe 2020 objectives, Emília Spišáková, Slovak Republic

Prediction of demand for primary bond offerings using artificial neural networks, Róbert Verner, Michal Tkáč, Sr., Slovak Republic

Support of innovation and SMEs quality as part of SMART policy of region, Renáta Nováková, Slovak Republic

Sustainability of digital public spaces, Matej Hudák, Slovak Republic

The effect of employee training and participation on customer satisfaction, Zulnaidi Yaacob, Malaysia

ABSTRACT

Purpose: This paper presents an analysis regarding the condition of Macedonian higher education institutions through one of the criteria for receiving a European Quality Award in the direction of the activities undertaken in relation to achieve the planned satisfaction of all those who have financial interest in it.

Methodology: The research is designed as an attempt to depict the existing condition within Ten Macedonian higher education institutions regarding quality system design and implementation, analyzed through 4 polls in the “house of quality” who’s top is the ultimate management, and as its base measurement, evaluation, analyzing and comparison of the quality are used. A special attention has been given to the gathering of the entering data included in the research. As an instrument, there was a questionnaire used that was designed to give an accurate analysis in a manner of complete and correct fulfilling.

Findings: Although the philosophy of total quality management (TQM) is deeply involved in many higher education institutions and business aspects of European and other countries, it is not sufficiently present in the country and other developing countries. In this paper we make an effort to, using the principles of TQM, develop a universal, integrated methodology for design and implementation of TQM system in higher education.

Practical implications: This methodology should help to give useful guidance to all higher education institutions tend to be educational institutions "world class". The model – methodology proposed is an integral and universal meaning that it is applicable to all higher education institutions, regardless of their nature, and the success of its application depends if it is only achieved integration of information technology with the internal standardization, methods and techniques for
improving quality, system cost analysis, but with continuing education and motivation of employees.

**Keywords**: higher education; leadership; methodology; quality system; TQM strategy.

1 INTRODUCTION

National Programme for the Development of Education in Macedonia (www.npro.edu.mk) expresses the desire of the state to bring about change in education that will enable compatibility of study programs, recognition and recognition of degrees awarded at all levels of education in European educational space and greater employability in the European labour market. The structure of the system of quality assurance in higher education institutions correspond to regulation, although there is a deep gap between management of quality and culture of quality. Higher education institutions are aware of the need to redesign the profile and curriculum and quality of teaching depends primarily responsible for the reassessment of values, attractiveness of an innovative learning environment, and in the highest degree will depend on the leadership of higher education institutions. Macedonian higher education institutions should accept new TQM strategy and implement it in educational processes.

The essence of TQM (Total Quality Management) strategy

TQM philosophy is embodied in many higher education institutions in the world, and its application means new key change in the approach to the quality of the educational process, according to Kano (1996). The first change concerns the establishment of a process of continuous improvement in all segments of higher education institutions with the involvement of academic staff, and the other, to meet the needs of all users (students, teachers, Ministry of Education, employment and professional bodies, society general and international forum) with the results of the institution.

Factors for successful implementation of TQM strategy in higher education institutions

A condition for successful implementation of TQM strategy in higher education institutions is having modern management, particularly strong leadership (according Ciampa, 2005). Leadership Initiative includes the top, commitment to TQM philosophy with their active participation, according to academics, penetration of opinions, proactive work style, teamwork, training, support for successful actions and achievements. Spreading the TQM conception in higher education institutions requires a particular social and cultural level of the middle (habits and mentality of employees), infrastructure creation and development of corporate culture in higher education institutions. In this paper we make an effort
to, using the principles of TQM, develop a universal, integrated methodology for design and implementation of TQM system in higher education Mitreva (2010). This methodology should help to give useful guidance to all higher education institutions tend to be educational institutions "world class".

2 METHODOLOGY

The research is designed as an attempt to depict the existing condition within Ten Macedonian higher education institutions regarding quality system design and implementation, analyzed through 4 polls in the “house of quality” who’s top is the ultimate management, and as its base measurement, evaluation, analyzing and comparison of the quality are used.

2.1 Objectives of the research

This paper presents an analysis regarding the condition of Macedonian higher education institutions through one of the criteria for receiving a European Quality Award in the direction of the activities undertaken in relation to achieve the planned satisfaction of all those who have financial interest in it (Mitreva, 2010).

2.2 Description of the instrument

A special attention has been given to the gathering of the entering data included in the research. As an instrument, there was a questionnaire used that was designed to give an accurate analysis in a manner of complete and correct fulfilling. At the same time, there were some direct contacts made with the top management and the employees in order to depict the authenticity of the questionnaire and to present the realistic condition of the Macedonian higher education institutions. The data received from the research are processed with an adequate mathematical – statistical methods. In this regard, the Pareto analysis was used for frequency as well as for analysis in order to calculate the involvement of certain answers in percentages.

2.3 Analysis and discussion of results

The usage of the internal standardization and quality providing within Macedonian higher education institutions

If the quality system is introduced and certified according the ISO 9001:2008 standard, it means that the higher education institutions will be aware about the values of quality and will be able to operate with it. There is a stiff determination of the top management regarding quality; also there is a defining and organizational culture, documentation for the system and trained individuals as well.

The alerting fact is that only 40% of the examined Macedonian higher education institutions (10) owe a quality system according ISO 9001:2008, which appears as a relatively small figure. The need of training according international
The usage of quality methods and techniques within Macedonian higher education institutions

Quality providing methods and techniques are instruments for implementing actions in order to improve quality. Those are integral part of quality management according a defined policy, aims and responsibilities of the higher education institutions, as well as creating comparative advantages on the market.

In order to find out if the Macedonian higher education institutions have established a control of processes by achieving defined quality with least costs of working, the question is raised: what type of quality control of services do they practice?

- 60% of the Macedonian higher education institutions have claimed that they possess quality control;
- 30% of them practice 100% control;
- 10% implement statistical control.

The quality as a phenomenon within the Macedonian higher education institutions is at a lowest level because of the bad managing of the business processes, inefficient control, and huge percentage of complaints, which exceeds the permitted one. The reasons are not the deficiencies of modern technology but weak managerial abilities, qualifications and completeness and qualitative leading of business processes.

Do Macedonian companies learn new things?

In order to get the real picture of the Macedonian higher education institutions, whether they learn and whether they stimulate the individual and collective
education in order to improve the outcomes of the organization in a way that is important for all users, there are few questions raised: do those higher education institutions gain additional knowledge?

- 60% of them practice training from time to time at work;
- 20% of them do not practice trainings for gaining additional knowledge;
- only 20% of them have attended a training twice a year that is a minimum of a yearly professional improvement in the era of education.

The alarming is the fact that 20% higher education institutions do not practice training for gaining additional knowledge and a lifelong improvement is the condition for survival on the modern business. Those real indicators show that not attending training on a regular basis is one of the reasons for being uncompetitive at the global market.

**How much is the motivation a significant factor for quality providing?**

The motivation of the employees is the most sensitive part of the organizational behavior and is expressed through contentment of the employees. The question how do the companies motivate the employees, the answer that appears most frequently is the increase of payment:

- 70% of the examined have responded that they motivate employees through salary raise;
- 10% of them motivate the employees by bonuses apart from the salary raise;
- 10% of them do it by allowing a development to a higher valued position in the higher education institutions;
- 10% of them motivate the employees using combined and complex methods that are known and accessible to all employees.

The necessity to build a solid system of quality and usage of TQM strategy within Macedonian higher education institutions would be realized only by building a system for motivation as a consisting part of the house of quality, and this refers to: integrity of motivation factors, as measure for stimulation and strategies that will systematically and planned incorporate within the working and organizational activities, in order to motivate the employees. But in order to achieve that, the top management needs to:

- attract and maintain the most quality personnel;
- provide a quality realization of the undertaken tasks;
- stimulate creativity and innovativeness;
provide an identification of the employees with the higher education institution and their engagement in its constant development.

How to manage the quality costs within Macedonian higher education institutions?

Quality costs appear because of existence or a possibility of a bad quality. The question whether Macedonian higher education institutions make analysis for quality costs (complains, reclamations, discarded products etc), the gained results refer to the following:

- 30% of them make analysis of costs in terms of quality;
- 70% of them set the analysis to a checkup of complaints of consumers, without analysis of the discarded, no checkup of its origin and reasons.

All of this leads to a major loss, not realizing of planned financial outcome, loss of respect, loss of additional time and material for corrections.

The practice within Macedonian higher education institutions refers to the fact that they do not pay attention to the analysis of costs for quality because of their lack of knowledge therefore the services are not competitive enough at the market. In this paper we make an effort to, using the principles of TQM, develop a universal, integrated methodology for design and implementation of TQM system in higher education, Mitreva (2010). This methodology should help to give useful guidance to all higher education institutions tend to be educational institutions "world class".

3 INTEGRAL METHODOLOGY FOR DESIGNING AND IMPLEMENTING TQM SYSTEM IN MACEDONIAN HIGHER EDUCATION INSTITUTIONS

The need of redesign or reengineering can occur in educational institutions who want to leave the traditional approach by introducing a new, modern approach to education and science. Both approaches are based on the same tenets: competence, ability and knowledge, but they are applied differently according to the country's technological development and higher education systems therein.

Although the philosophy of total quality management (TQM) is deeply involved in many higher education institutions and business aspects of European and other countries, it is not sufficiently present in the country and other developing countries. Especially critical is the long term point of this philosophy, when results do not come “overnight”. Globalization allows creating a European area of higher education in order to facilitate joint knowledge creation and greater mobility of students and academic staff. Thus Europe has become a common
space of higher education, the rules and principles designed to work together and to use the common results.

In this paper is given integral methodology for the design of TQM (Total Quality Management) system in higher education institutions and its implementation in practice of higher education, as well as actions to be taken to build a system of quality assurance. The success of the application of TQM strategy depends on the commitment of the academic staff and administration and their motivation.

Integral methodology for designing and implementing TQM system, as suggested in this paper, consists of more methodologies Mitreva (2010): Methodology for subsystem-internal standardization; Methodology for subsystem-Statistical Process Control (SPC); Methodology for analysis of total cost of a given process; Methodology for subsystem-education; Methodology about evaluating the success of the designed and implemented system in TQM (Audit). Basis in creating this model is redesign, after that, it starts a new phase of business-continuous improvement, or turning round Deming quality (Plan-Do-Check-Act).
3.1 Methodology for subsystem – internal standardization

Each institution builds its own quality assurance system in accordance with the teaching - educational field that nurtures and under the conditions in which it is performed, and within the European standards for higher education. Working under the acts that defines all procedures of teaching - educational and scientific - research and obligations and responsibilities of all employees. The development flow of the design and implementation process of internal standardization is carried out through the following activities (See Figure 1).

**Figure 1 – Flow of process design and implementation of the subsystem of internal standardization**

Checking (assessment) is organized within the institution (self-evaluation) and out of the institution by the Agency for evaluation.
3.2 Methodology for subsystem - Statistical Process Control (SPC)

Measuring the quality of the educational process is carried out by applying appropriate methods and techniques, which provide data collection and information about the current situation. Based on the data and information evaluated basic level indicators work and selected problems that require special attention. The ongoing construction of the subsystem of statistical process control is carried out through the following activities (See Figure 2).

![Figure 2 – Flow of the process of designing the subsystem SPC]
3.3 Methodology for analysis of total cost of a given process

TQM strategy requires quality management processes, and management costs. The methodology of the cost can be used for any process in the higher education institution (see Figure 3).

**Figure 3 – Flow of the process of designing the subsystem of costs**
### 3.4 Methodology for subsystem – Education

The system providing total quality management should not only be designed well but it is necessary its consistent implementation in practice. It is therefore necessary continuing education, training, management and academic staff, training of students and the administration and application of Deming circle of quality (See Figure 4).

3.5 **Methodology for evaluating the results of the implemented system and projected on TQM (Audit)**

The purpose of the fifth stage – control is the assessment and monitoring of the results of previous stages (see Figure 5).

![Figure 5 - Flow process for evaluating the success of the designed and implemented system in TQM](image)

At this stage of verifying and modifying the system to create new rules, procedures, instructions to staff and other norms of operation.

### 3 CONCLUSION

The model – methodology proposed by (Mitreva 2010) is an integral and universal meaning that it is applicable to all higher education institutions, regardless of their nature, and the success of its application depends if it is only achieved integration of information technology with the internal standardization, methods and techniques for improving quality, system cost analysis, but with continuing education and motivation of employees.
Integral methodology for designing and implementing TQM system has feedback as a result of the necessity of ongoing improvement of educational processes. By repeating or spiral repetition of such cycles will see the benefits of the application by changing the organizational culture to such initiatives and an incentive to higher goals of excellence.

This methodology not only a success in the implementation of the improvement of educational processes in Macedonian higher education institutions, but to raise awareness of the academic staff and administration for their quality and focus on increasing the satisfaction of students, teachers, Ministry of Education and Science the employment and professional bodies, society in general and international forum. But without the support of leadership and without the involvement of academic staff, all efforts to improve will be in vain.

**Benefits of the proposal – the methodology for designing and implementing TQM system in higher education institutions**

Benefits of the methodology for designing and implementing TQM in higher education system are:

- the application of internal standardization improves responsibility of academic staff in the implementation and administration of the educational process;
- the application of statistical methods and techniques to ensure the quality of education;
- application software packages increases performance in the application of statistical methods and techniques;
- by analyzing the cost of quality can be controlled losses and to reduce them to the minimum.

Besides these other important effects are expected to be achieved, such as:

- involvement of all employees in achieving the quality of the educational process;
- employee commitment to improving the quality of education;
- full commitment of top management to the system in TQM and its continuous improvement;
- ability to solve problems at all levels;
- small but significant improvements in educational processes and services;
- optimization of the educational process;
- disposing responsibility for decision-making at lower levels.
Without the commitment of top management to set goals for the quality of the educational process and consistency in their implementation, these efforts will only be spending time and money, while at the same time will reduce the possibility of following such a successful initiative.

It should be emphasized that the benefits of the introduction of this model are not seen immediately, but in the long run. But it should not be a reason for the initial failure of the initiative, because quality is a long term process.

The benefits of implementing this model not only increase the commitment of top management and academic staff to improve the educational process, but achieving satisfaction of students, parents, teachers and society, we will continue to serve as the driving force for continuous improvement.

However, the conclusion remains that there is a clear determination of the Macedonian higher education institutions for the care and responsibility for ensuring and improving the quality of education, and thus increased the interest for cooperation with universities in the country, the region and Europe.
