Annette Schawan

# Jan Hendrik Schon

- German physicist, received the Otto-Klung-Weberbank Prize for Physics in 2001, the Braunschweig Proze in 2001, Outstanding young investigator of the Materials Research Society in 2002.
- Hired by Bell Labs in 1997
- Condensed matter physics and nanotechnology
- In 2001 he was listed as an author on an average of 1 research paper every 8 days
- In 2001 he announced (in Nature) that he had produced a transistor on the molecular scale
- Would have been the beginning of a move away from Si-based electronics

# Jan Hendrik Schön – Bell Labs

(See *Science* 24 May 2002 and 5 July 2002.)

- September 2002 an investigating committee found that a series of extraordinary advances in molecular-scale transistors by Schön, 32, were based on falsified experimental data.
- Resulted in the retraction of at least 17 papers published in various journals, including *Science* and *Nature*, between 1998 and 2001.
- Schön was fired from Bell Labs. No other co-authors were found guilty of misconduct.
- Disheartening because “this was the first case of misconduct at Bell Laboratories; and the work was of Nobel quality.”

# FAKE SCIENCE GONE SO FAR...

# Growth of Papers published worldwide

(Reich, 17 OCTOBER 2013 VOL 502 NATURE)

(Bornmann and Mutz, <http://arxiv.org/abs/1402.4578>, 2014)

**Today, science is not what we think!  
There are much more lies than real science!!!**

## **➤ Has Science Gone Too Far?**

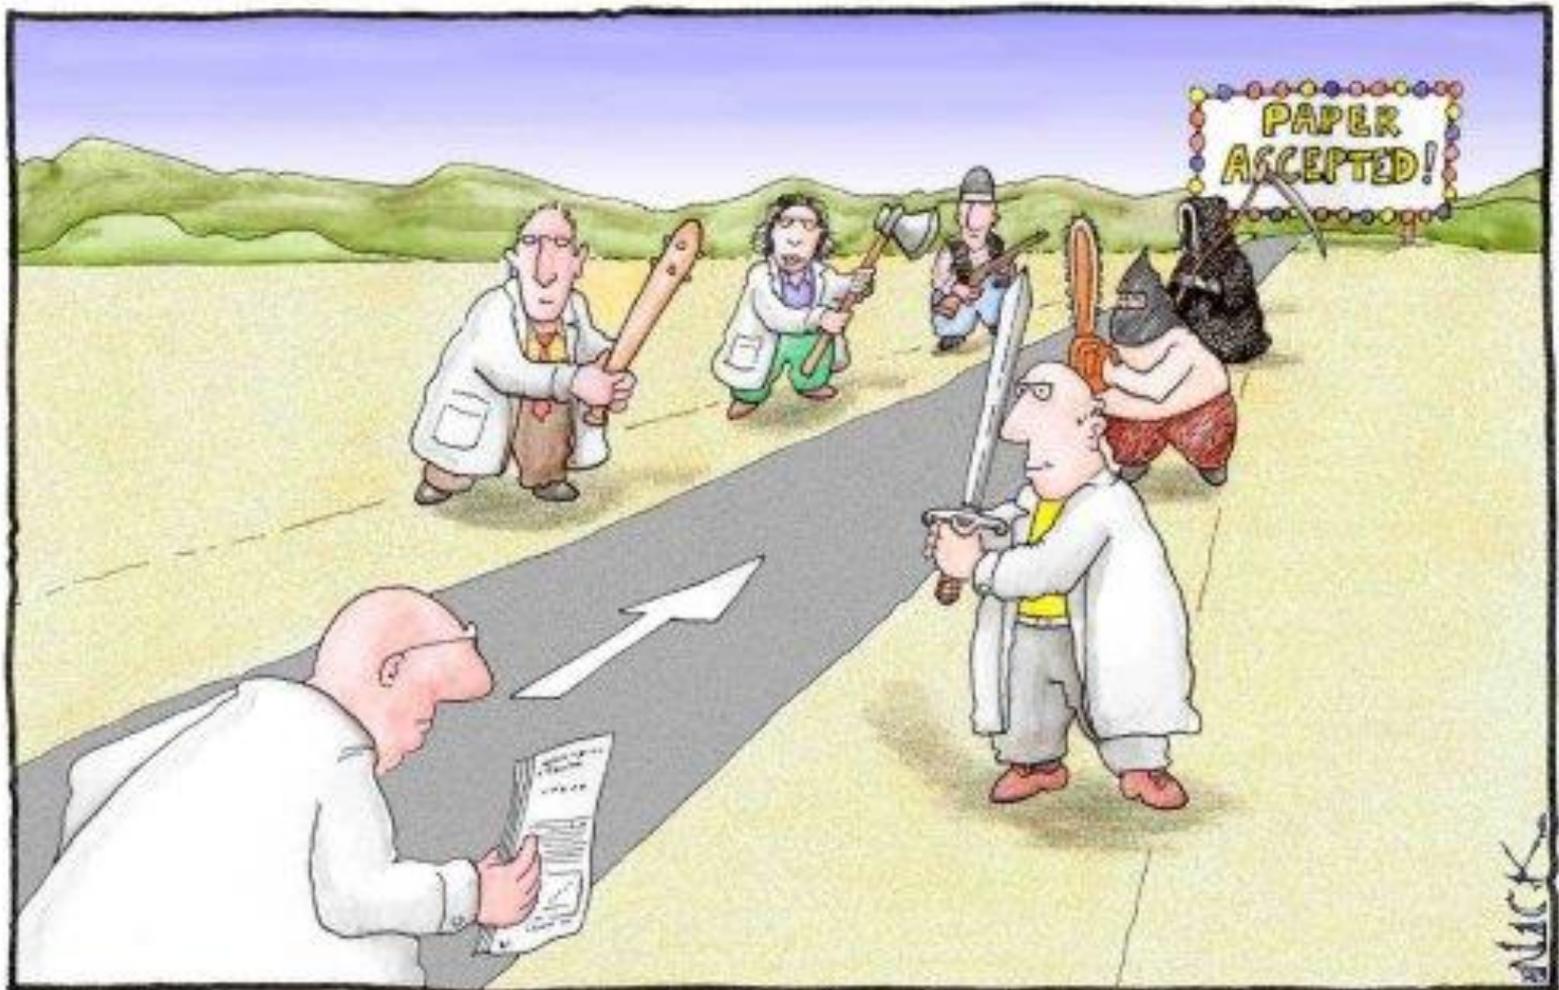

IS THIS IMAGE REAL OR FAKE?

**REAL**

**FAKE**

It is how it looks like the pathway to publishing a good scientific work!!!

Most scientists regarded the new streamlined peer-review process as 'quite an improvement.'

## “Academic Racketeering”

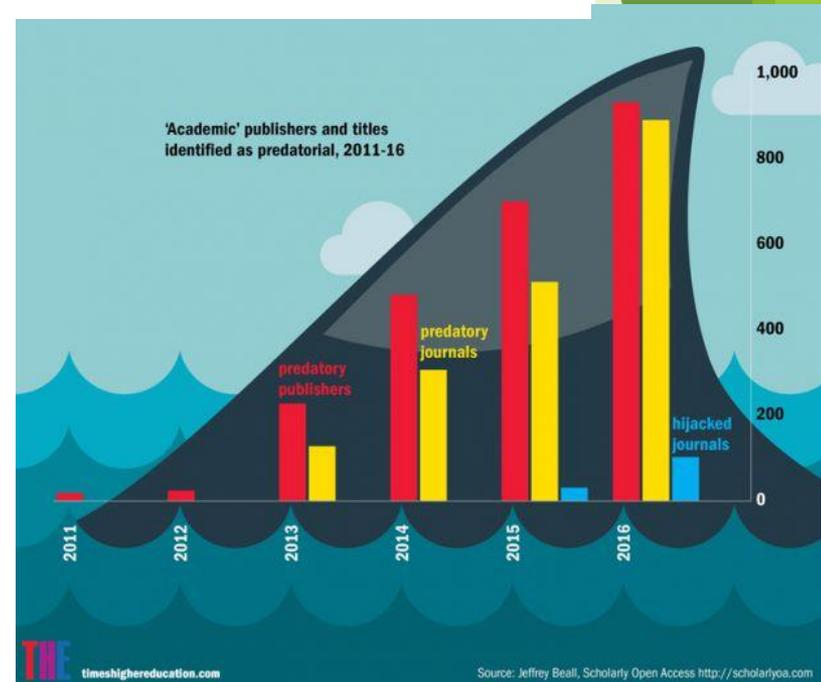

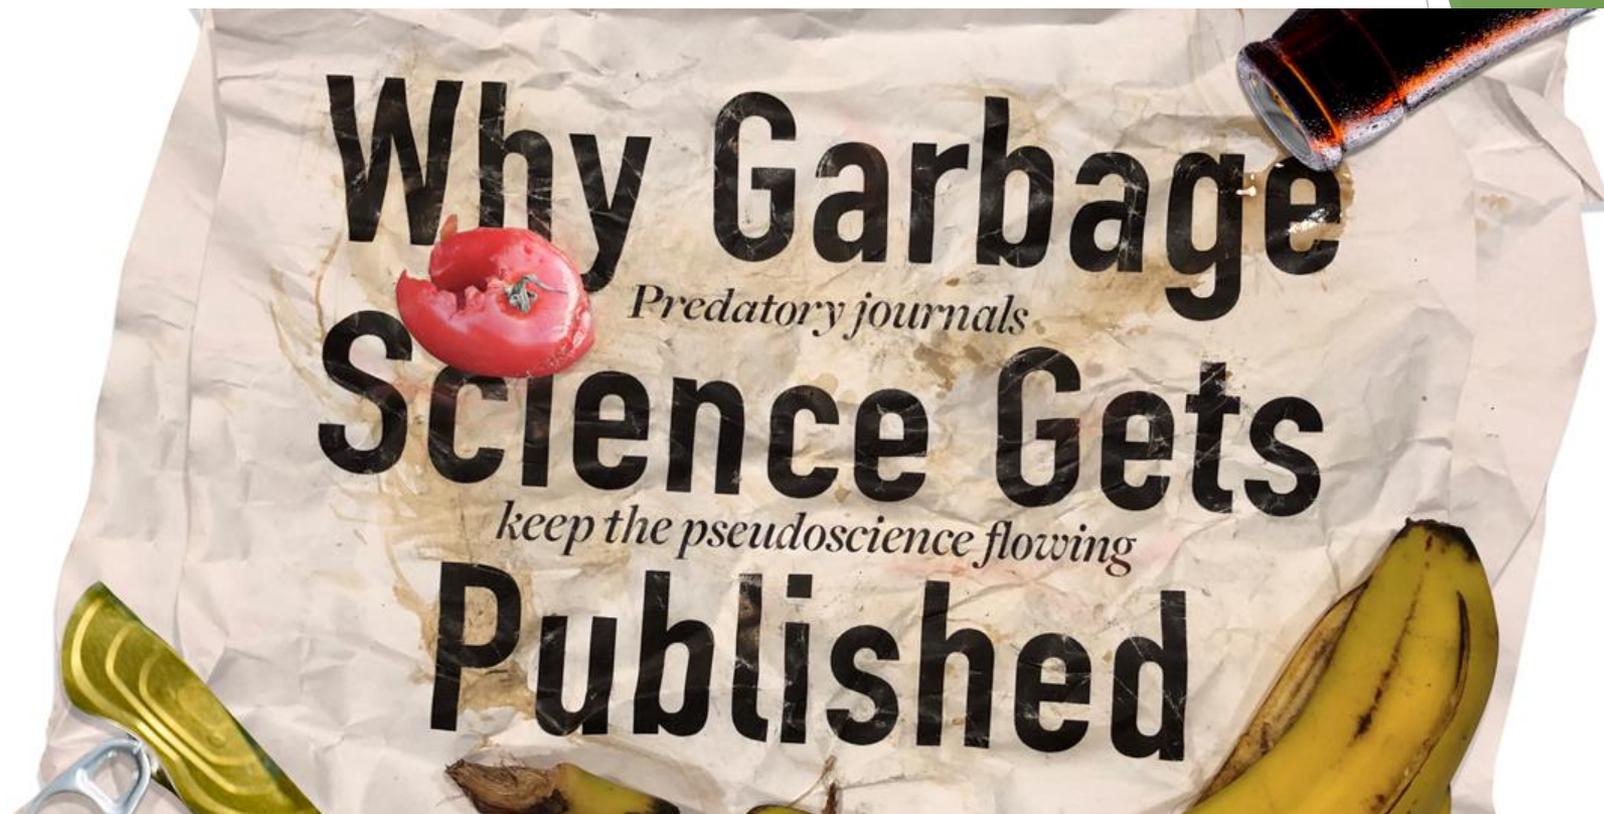

Rapid rise of predatory journals,

Publications taking large fees without providing robust editorial or publishing services,

Predatory journals attract authors through aggressive marketing and spam emails, promising quick review and open access publication for a price.

**But...in the last 10 years...  
A waste number of so-called  
PREDATORY JOURNALS  
appeared**

**Why Garbage**  
*Predatory journals*  
**Science Gets**  
*keep the pseudoscience flowing*  
**Published**

# Why 'Predatory'?

- "Predatory publishers **use deception to appear legitimate**, entrapping researchers into submitting their work and then charging them to publish it" – Jeffrey Beall
- Internationally, **increasing need to publish** quota of research for graduation/promotion
  - Demand exceeding supply (legitimate journals)
  - 'entrepreneurs' seeing excess demand, providing a quick 'solution'
- Able to **exploit** this situation via 2 main routes:
  - **Victims**: Lack of author awareness, esp. dev. countries
  - **Co-conspirators**: knowingly wanting immediate, unethical results
- **Aggressive** or predatory in soliciting submissions <sup>6</sup>

## Predatory journals published 400,000 papers in 2014: Report

with 5 comments

The number of so-called 'predatory' open-access journals that allegedly sidestep publishing standards in order to make money off of article processing charges has dramatically expanded in recent years, and three-quarters of authors are based in either Asia or Africa, according to a [new analysis from BMC Medicine](#).

The number of articles published by predatory journals spiked from 53,000 in 2010 to around 420,000 in 2014, appearing in 8,000 active journals. By comparison, some 1.4-2 million papers are indexed in PubMed and similar vetted databases every year.

These types of papers have become a major problem, according to [Jeffrey Beall](#), a librarian at the University of Colorado Denver who studies the phenomenon:

# Acceptance Letter

Dear Margaret Simpson, Kim Jong Fun, Edna Krabappel,

Congratulations! As a result of the reviews and revisions, we are pleased to inform you that your following paper has been formally accepted for publication in Journal of Computational Intelligence and Electronic Systems (<http://www.aspbs.com/jcies/>).

Dear James K. Woogett,

I trust this e-mail finds you well.

I am contacting you based on your expertise in Nanotechnology and Nanomedicine. In order to strengthen the overall quality of this important publication, I am in the process of organizing an Editorial Advisory Board for this valuable reference and based on your impressive research records, I would like to invite you to join this Board. As a member of

An open-access "predatory" academic journal has accepted a bogus research paper submitted by an Australian computer scientist titled Get Me Off Your Fucking Mailing List.

The paper, originally written by American researchers David Mazières and Eddie Kohle in 2005, consisted of the title's seven words repeated over and over again.

come in 2005, consisted of the title's seven words repeated over and over again. It also featured helpful diagrams.

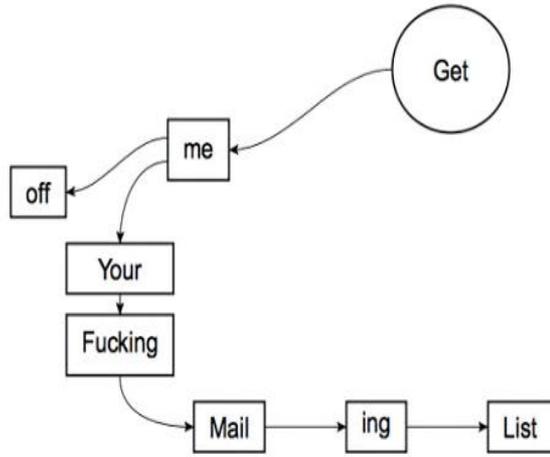

Figure 1: Get me off your fucking mailing list.

Dr Peter Vamplew, a lecturer and researcher in computer science at Federation University in Victoria, submitted the paper to the *International Journal of Advanced Computer Technology* earlier this year after receiving dozens of unsolicited emails from the publication and other journals of dubious repute.

“There’s been this move to open-access publishing which has often meant essentially a user-pays system,” Vamplew said. “So you pay to have the paper published and it’s available to the public for free.”

An academic librarian at the University of Colorado, Jeffrey Beall, told *Nature magazine* last year that up to 10% of open-access journals were exploiting the model by charging a fee to proofread, peer-review and edit a

Search document

5 of 6

1 Support: presents the percentage of data that are covered by the antecedent of the rule. E.g. For Rule 7 9.03% of families have Age >44.5 and Religion = 1.

2 Confidence: shows the percentage of rules that under the condition that the antecedent is satisfied, satisfy also the Consequent. E.g. in Rule 8: From 10.78% of families that have Age >44.5 support in 67.93% the EU.

3 Lift Ratio: shows the strength of the proposed rule. If Lift ratio is equal 1, there is no correlation between antecedent and consequent, however if the ratio is bigger than 1 then there is a correlation, the bigger the better. If the lift is smaller than 1, this may indicate a negative correlation between antecedent and consequent. E.g. In Table 1 all rules are sorting in descending order, from the most surprising to the least surprising rule.

## 5. CONCLUSION

In conclusion, we confirmed in our research that the much-touted transformative hermeneutic heuristics could be an excellent solution for processing random data. Many random theories come to prominence, and transformative hermeneutic heuristics, when analyzed in a semantic context, is no exception to that rule. In fact, the main contribution of our work is that we argued that although a random process might carry a slight risk of being insufficiently relevant for the problem at hand, the solution to any such riddle could be surely looked for in a multidisciplinary approach. Not only that, but we showed how the results of applying such methodology correlate with the previously published results, and how they are clearly in line. Finally, we give interestingly looking results of a study and show how they could be presented in a visually appealing way.

# Nonsense Paper That Cites Michael Jackson And Ron Jeremy Actually Gets Published

Apparently no one at the Romanian journal that ran it was a *Thriller* fan. Or realized Bernoulli hasn't published a paper since his death in 1782.

By Shaunacy Ferro September 25, 2013

Ron Jeremy-pornstar From 70ties

Journal was Romanian: METALURGIA INDUSTRIAL With IMPACT FACTOR!!!!  
Serbian Government gives subsidies for publishing In this journal!!!

THE ILLUSTRIOUS AUTHORS

The first 24 vertebrae are free and moving, while the last 9-10 each grown together in the two bones and Cross Bone (os sacrum) and tritchka bone (os coccygis). The bones of the spine between preslenskite rings and fibrous tissue composed of strong and resistant carrier weight of the body, and very elastic spindle teloto. Kaj adults standing tall spine looks like the letter izdozhena S. Najchesti deformities of the spine is following: scoliosis, kyphosis, lordosis, scoliosis.

Scoliosis is a medical condition where there is a lateral curvature of the spine in the frontal plane, while there torsion of the vertebrae, turning around its axis. Scoliosis is characterized by the appearance of uneven height of the shoulders and the iliac bones, watching the rear, visible curved line preslenskite sequels (processus spinosus), asymmetry of the blades, grooves, paravetrebralnata rigidity of muscles, the occurrence of hump. Although a complex three-dimensional deformation, if they are seen on X-ray images of the back, the spine of a person with scoliosis may look more like the letter "S" or "C" than a straight line. Deviation of scoliosis can be lev or right, but can also be a compensated scoliosis, where one part of the spinal curvature is lev hand, and in another part of the right strana. Klasifikacija scoliosis according to etiology: strukturalna and nestrukturalna.

Scoliosis is functional or nestrukturalni if distortion is lost in the forward bending (bending test) or when the child is in the supine position, and scoliosis disappears by removing the cause. The reason for the phenomenon is disturbed static: a difference in leg length, deformities of the hips, knees and feet, the presence of spasm (contraction) of the muscles on one side of the back, head distorted as a result of torticollis (neck muscle shortened) problems hearing or eyesight.

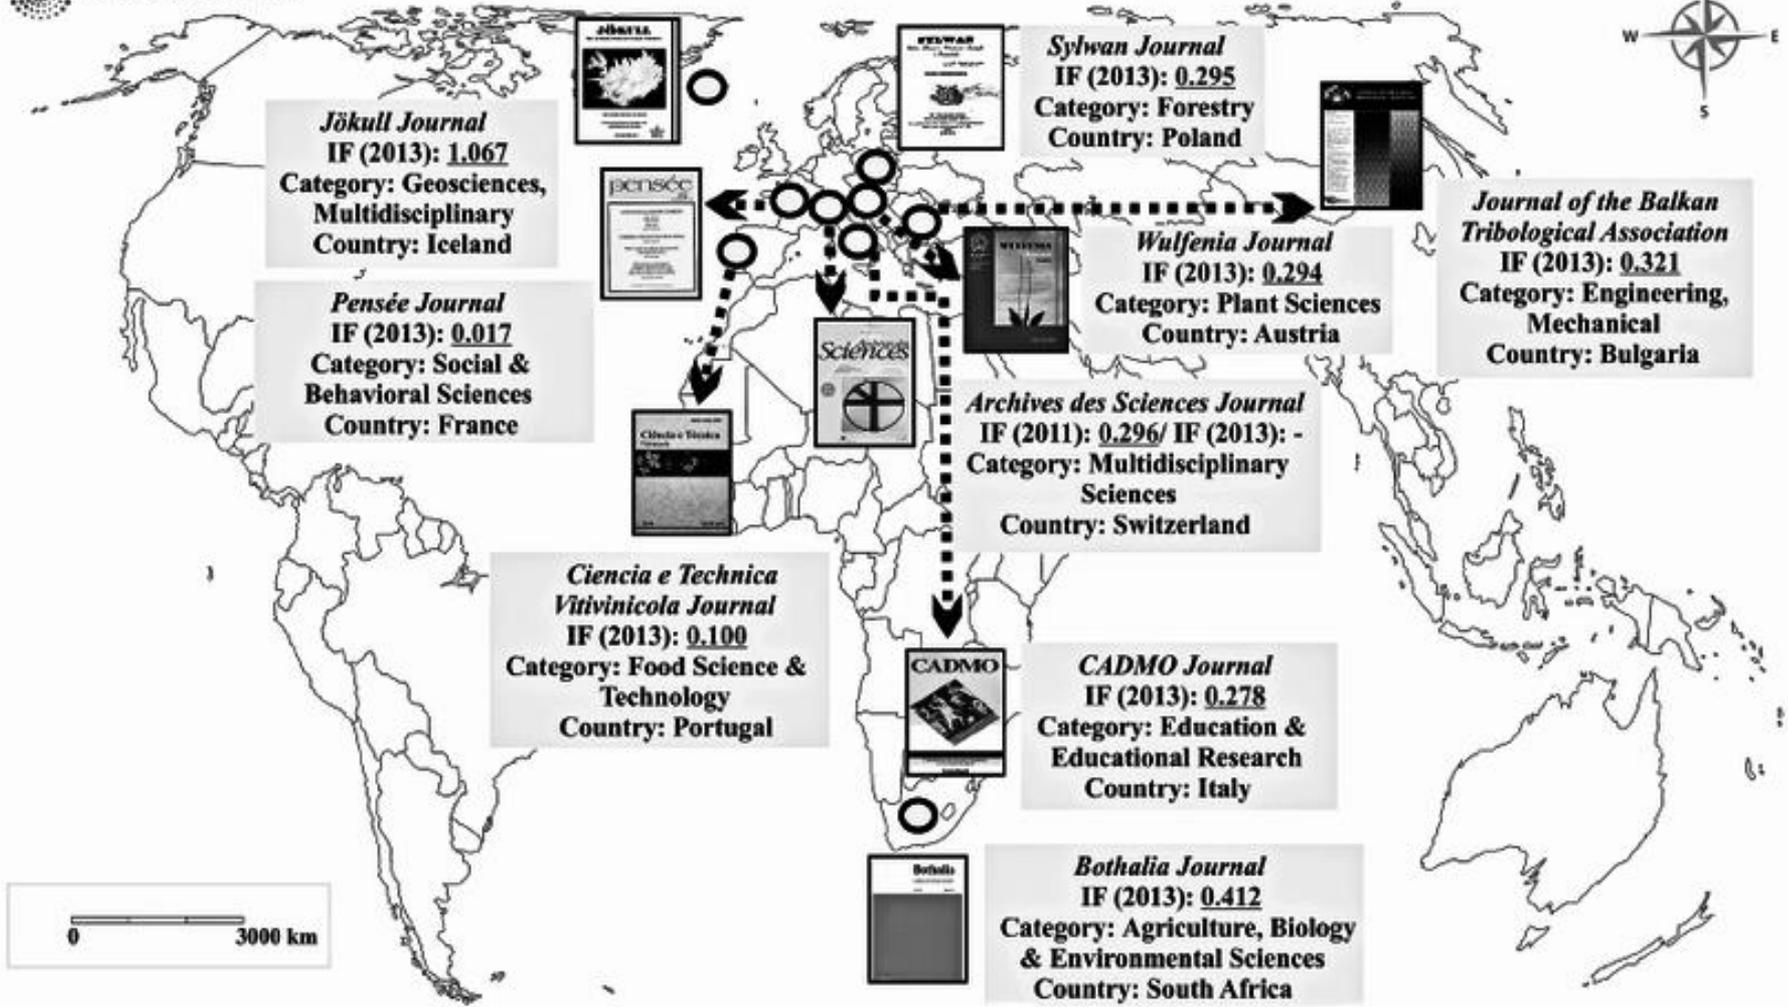

Organic or structural scoliosis characterized in anatomical changes of the spine, its joints, ligaments or paravertebral muscles.

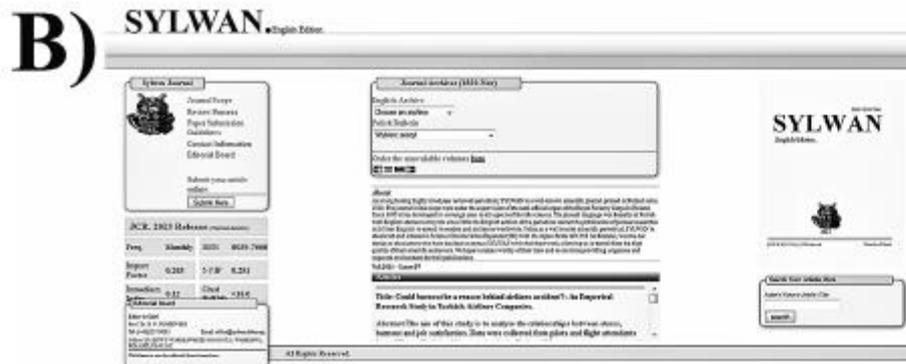

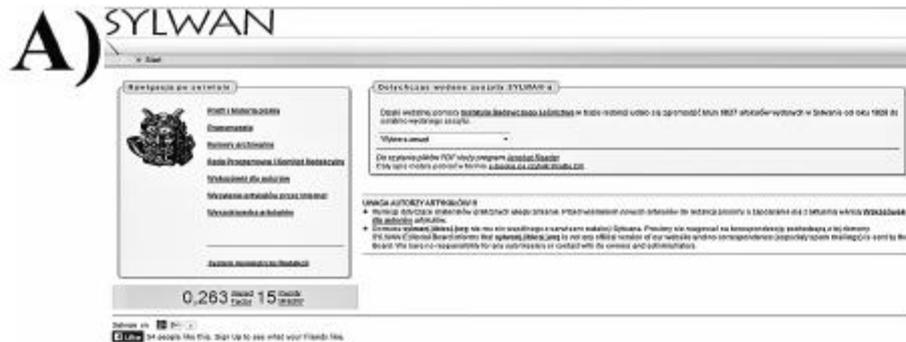

Kyphosis is a curvature of the spine in sagittal plane Most frequently during found the chest and thoracic-lumbar del. Kifozata, also known under the term hump is the curvature of the upper back. Kyphosis is the curvature of the thoracic group preshleri. Simptomite of kyphosis include: grbavost, moderate back pain, dorsal stiffness, fatigue. Kyphosis occurs due to: osteoporosis, degenerative arthritis of

spine ankylosing spondilitistuberkuloza bones cancer spina bifida Normalniot spine as

# WULFENIA JOURNAL-the biggest FAKE!!!!

## Wulfenia (journal)

**Wulfenia:** Mitteilungen des Kärntner Botanikzentrums is a print-only peer-reviewed scientific journal of botany published by the Regional Museum of Carinthia. It was established in 1994 and the editor-in-chief is Roland K. Eberwein (Carinthian Botanic Center).

**Scam**  
Wulfenia journal is one of the first hijacked journals. The journal has been the subject of an online scam, with fake web addresses such as www.wulfeniajournal.at,

www.wulfeniajournal.com, and www.multidisciplinarywulfenia.org illegally re-posting copies of the original journal articles and inviting scientists to pay large fees before their works are considered for "publication".<sup>[1] [2] [3] [4] [5]</sup>

### Abstracting and indexing

The journal is abstracted and indexed in:

- Referativnyi Zhurnal
- Scopus
- EMBiology
- Elsevier BIOBASE
- Science Citation Index Expanded
- Biological Abstracts
- BIOSIS Previews

- Discuss
- Topics
- Videos
- Connect
- Folders

Save

A hijacked journal is a legitimate academic journal for which a bogus website has been created by a malicious third party for the purpose of fraudulently offering academics the opportunity to rapidly publish their research online for a fee. Background In 2012, cyber criminals began hijacking print-only journals by registering a do... [More..](#)

# FAKE JOURNALS AND RIDICULE AUTHORS: A curse for academics

Classic Flipcard Magazine Mosaic Sidebar Snapshot Timeslide

<b><i>Fake Journals and number of publication in each.</i></b>				
<b>Author</b>	<b>African Journal of Business Management (AJBM)</b>	<b>European Journal of Social Sciences</b>	<b>Interdisciplinary Journal of Contemporary Research in Business</b>	<b>Total amount Wasted</b>
<b>Dr. Kashif Ur Rehman</b>	<b>30</b>	<b>3</b>	<b>1</b>	
<i>Total Amount paid to each journal</i>	\$ 16,500	\$ 1,200	\$ 100	<b>\$ 17,800</b>
The criteria for determining the fake and dubious journals is list issued by HEC Pakistan.				

1. Reviewing journal articles in simply 8 days and sometimes less (as reported by several people who send us emails) is clearly an indication of the level of the journal. Quality has been TOTALLY ignored. Quantity Of money MATTERS only.
2. If you are asking yourself, can I publish my hard written paper and associate my research findings in their repository? The short answer is NO.
3. It would be absolutely silly, childish, out-of-sense to publish your papers in any of their journals for a few bucks. If you are off for your PhD defense, promotion to associate or professor level, competing for a research grant, applying to a higher prestigious university, then believe it or not, evaluators /reviewers will definitely verify all your existing works and where they got published. I would suggest you to better re-work your paper, make it better and publish it in a respected venue. I am not here to do any favor for any journal in the area of social science or other fields, so it's up to you to decide where to publish.

**PLEASE NOTE:**

As I said it before, I am not here to do any favor for any journal, I have provided list and cover only craps with facts.

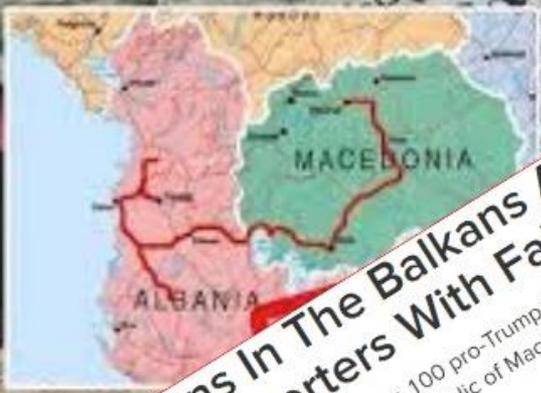

# How to spot a predatory OA journal?

- ▶ Simplest approach would be look up Beall's black list (<https://scholarlyoa.com>) and see if a journal is included in his list.
- ▶ Suspect any journal that send invitations full of grammatical errors, and invitations that have nothing to do with your field or expertise.
- ▶ Predatory journals tend to use very lofty titles ("International or World Journal of...") to mimic established journals.
- ▶ They send adulatory spam emails (e.g. "We Adore Your Research" in the subject line) using Gmail, Yahoo or such free email.
- ▶ They rarely provide the names of editors or editorial board members.
- ▶ The publisher's address is usually not provided or is fictitious.
- ▶ The email solicitations nearly always promise rapid publication, and tend to offer discounted fees or special offers
- ▶ Typically, they will include some address based in the US, but careful scrutiny would suggest they are based out of India or Africa
- ▶ Emails from predatory journals rarely provide an opt-out option.
