THE INFLUENCE OF MACEDONIAN MENTALITY AND THE OLD HABITS IN CREATING BUSINESS

Elizabeta Mitreva¹

Abstract

In this work, it's given analyses of the Macedonian companies about making up a business culture and a comparison with the business culture in the world. As a result of the researches, a new management system is offered that is based on the TQM (Total Quality Management) philosophy. The solution was found in improvement of the management system by accepting the new TQM philosophy and utilization of its strategy, development of the staff and promotion of the processes, and all of that is done earlier, even before the new technology and the separate IT are bought.

One of the biggest changes that the new TQM strategy requests from the Macedonian companies is to change the mentality and quit the old habits and the transitional syndrome. That means that the positive characteristics in the Macedonian mentality should evaluate, and the traditional values should be successfully joined with the cultural values and the current trendy values from the west, which rule the world.

Keywords: TQM (Total Quality Management) philosophy, management system, traditional values, business culture.

Introduction

Macedonian folks have been living for centuries in an area that verges with the global cultures, religions and civilizations. Many conquerors had their own mental type (through their religion, culture, standards...), and invading methods as well. As the time passed, a defensive mechanism against the foreign and new values was made in these areas, because of the fear of losing the personal identity. That led to isolation and illusion of self-contentment.

¹ Assistant Professor Elizabeta Mitreva PhD works at the Faculty of Tourism and Business Logistics, Goce Delcev University, Shtip, R.Macedonia. E-mail: elizabeta.mitreva@ugd.edu.mk

This mechanism leads to rebellion against the changes and the learning, and also against the success, because we can achieve success only with changes and learning. The basic problem of Macedonian people is how successfully to join their traditional values with the civilization values and with the current trendy west values that rule the world. The problem with the Macedonian mentality is that they persistently and irrationally object the exterior mental type, instead to analyze and use them. But, when a new mental type is accepted without detailed analysis, they easily and unwisely give up their own traditional type.

In order to find the key to happiness of Macedonian companies and the community, it is important to analyze some characteristics of the Japanese, English and Macedonian mentality and to draw morals.

In the companies that strive to implement the Total Quality Management (TQM) strategy, there is also an awareness of the need to improve the business processes. The management of certain actions creates a positive working atmosphere and builds management teams and confidence. It also encourages the generation of new ideas and takes stock of codification or transfer of ideas from the minds of the employees in an explicit form and their implementation. Generating new ideas is the result of the employees' innovation and creativity and it can be encouraged by certain management activities. To build a good system for ensuring quality in the Macedonian companies, it is necessary to engage all of the employees. It would take time and knowledge as well as cooperation among the employees and a sense of teamwork. The introduction of the quality system is teamwork and, in an environment where the rules of teamwork are not respected from the start, this system is assessed as unacceptable. Providing quality (Cepujnoski at al. 1993:170) requires constant improvement and development of processes and services, but it can include only those employees who are fully engaged in the working process in order to develop their total internal dispositions. Akio Morita (the founder of Sony) says: "There is no secret ingredient or hidden formulas that determine the success of the best Japanese companies. Neither theory nor planning and government can lead to success. It is only possible with and as a result of work done by the employees". The top management of the organization is a collective body. For Craig & Lineberry (2001:242), this means a need for a number of people working together to create vision, mission as well as strategy in order to achieve adequate results of the organization. In addition, a large share of the organization and culture affects the willingness of top management to work as a team (Smileski 2000:70). Often, discussions about teams are declarative because managers are not yet willing to be team players. Managers who are involved in the planning, organization, management, control, and development have rights and obligations to upgrade their knowledge and skills regularly and continuously because the development of the human resources influences the survival of the companies (Beardwell at.al 2004:191). The tasks of the top management should be to learn the duties and responsibilities of each employee who contributes to create a poll of the company (Drucker 1995:92). The constant exchange of information makes the organization strong and vibrant and it also creates an atmosphere of openness and trust between employees at all levels. The management teams are a unique business potential that can initiate, identify and manage change within the organization. Studies have shown that employees worldwide work better if they are required to achieve a higher level goal, in contrast – if there are no targets. As for the purposes of having beneficial effects, they must be specific. measurable, achievable, and challenging. Grinberg & Baron (1998:401) cite some necessary steps for proper managerial work: if you want to increase productivity, the goals must be high and exactly defined; the presence of the employees in the process of setting objectives is necessary; the feedback allows employees to achieve its target value. This paper surveys Macedonian companies in terms of building a working atmosphere, creating management teams, improving business processes, and fostering innovation and certain conclusions that are to be based upon them.

Comparison between the Japanese and Macedonian Business Culture

The experience for the TQM (Total Quality Management) philosophy in the world compared with the situation in Macedonian companies shows that: The TQM philosophy had best results in Japan (Sasaoka 1995). There it's based on the Japanese culture and mentality, and it's adjust to accept the values of the west civilization. The Japanese (Kratsu, 1995) knew their weaknesses and developed the abilities they had n't and based it on the present values. The universal belief is that they are reproductive and creative a little, but have a noticeable corporate spirit. They developed the team work, without holding it down, but with developing the individualism and creativity. Meanwhile the Macedonians built up collectivism and held down the creativity and the individualism. Thanks to that, Japan nowadays, beside America is the owner of most of the innovations in the world, as a result to stimulation of cooperation instead of confrontation, which is characteristic for Macedonian mentality. Besides, Japanese are concentrated on common little improvements unlike the Macedonian orientation towards creating something big and spectacular.

One of the important characteristic of the Japanese mentality is (Latzko, 1995:230) persistence and orientation towards systematic and long-term solutions and results.

We often can notice superficiality, improvisations and short-term solutions in Macedonian companies (Mitreva, 2010). There are positive results only when there are higher aims, which are rare, request a lot of energy and are achievable only with powerful leadership.

Macedonian view towards life is to live the day to the fullest, and it shows lack of vision for the future, because these people possess a lot of vital energy. That is the power of this civilization and its quality, but there is also a lack of elegance towards life and lack of plans for the future. When there is not any vital energy left, the intellect takes the energy.

Japanese experience shows that in order to activate the human behavior, important are (Kratsu, 1995) the persistency, patience and boost of the leaders, and the tuition and motivation of the employees. The concept of controlling the human resources in Japan is based on the following fact: knowing their place and role in the organization, the employees can understand clearly the organization's philosophy and its tendency to realize the organizing aims.

Comparison between the English and the Macedonian Work Culture

In order to understand how the West gathered forces and accepted the Japanese experience (Kano 1996:105) that was adjusted to their mentality; it would be useful to compare some of the Macedonian characteristics with the American ones.

The Macedonian people have not learned the self-control. They have an active temperament, react quickly on any kind of influence, are not able to control their feelings, and that causes their grumpiness, passionate wishes and a lot of anger when the wishes are not fulfilled. Because of the disability of controlling the emotions, the work is presented far more worse that it really is. These people are intelligent and witty, but they jump to one-sided decisions, without previous calm thinking.

The difference between Macedonian and English goodness is that these people are willing to do anything for the people they care about.

The English are not as willing as the Macedonians, but unlike the Macedonians they are ready to help even people they do not like, but that are in danger. *Macedonians do good things because of love, and English do the same thing because they are feeling it is their duty.*

The ability of self-control makes the Englishmen masters of their feelings. These people have calculated exactly what, where and how much should they feel. Because of that balance, they keep all of their feelings together although the same feelings are confronted. They divide their personality to public and private. When they do their job, their duty, they are featureless and spiritless. They do not know about stubbornness nor about whim, which are Macedonian characteristics. Analyzing this (Mitreva 2010:120), we come to the characteristics of Macedonian mentality and the approach that should be used for motivational involvement of the potentiality of the employees for building up a business culture and teams.

The example from the Japanese and the English show how the big nations adjust to changes. Also, it must be mentioned that both nations are traditional and do not deny the values of their tradition, but they just include exterior mental types into their building of a new experience. The main problem for us and many others is that we have hard time adjusting and accepting the change, which is very important for the punctuality of the business relations.

Comparison between the American and Macedonian Business Culture

The money is the key priority and the American managers are well known for their time-serving orientation and their willingness to take a risk only if the financial aspect is tempting. It is of a great importance for Americans to make decisions quickly and decisively (which we have problem to accept), the directness and the concise information with a point. Also we mustn't forget the consistency and the determination as specific characteristics of the American business people. It can be noticed especially in bad business situations, when the managers often tend to look at the cause of the problem as a potential business opportunity that should be for personal usage. There are many other characteristics, but those that I mentioned before are the reason that makes USA the most powerful economic force in the world and gives it strength to survive these turbulent periods of world financials and

economic crises (recession). It is more than certain that they will surpass the crises before any other country, and will have minimum consequences (compared to other countries).

The Influence of Macedonian Mentality and the Old Habits in Creating Business Culture in the companies

The problem that Macedonian companies have with employees and team work is two-sided:

- we have a problem with our mentality which contains emphasized individualism and
- we have a problem dividing the old habits from participation into solving the problems, amendments and innovations.

The lack of desire to have order and discipline into the intellectual world is the same with the one of a common illiterate villager. Here everyone do things on their own. No one shows an interest towards others and a common proverb is: "There isn't anyone without who we cannot work".

Because of these reasons, a medium and limited force and potentiality of people comes onto the surface. This characteristic stops our social development. Macedonian people have been managing on its own during many centuries with its own force and intellect. People were educated by their families and according to the proverb: "Have faith in yourself, think of yourself first and then of others", which led to too much self-confidence and wanting a lot of personal freedom. That is the basic reason for the difficulty to discipline people in our society.

One of the powerful sides of Macedonians is their rebellion against the global strive towards equality, because they want self-freedom and development. As a result to that there is a multiplicity in freedom of thinking, feeling and fondness. The strive of Macedonians towards as more free as possible can be noticed everywhere in the social circles.

The characteristics of Macedonians are: the ability of great zip in key moments, the natural with of the mind, independence, raw judgment and temperance. The consequences of self-management and the transitional period caused occurrence of more negative characteristic in our mentality, such as: envy, personal conflicts and consumption of energy in vain, too much individualism and disability of organizing a team-work. The progress during the transition was easier when done with poltroonery and demagogy than with work results.

All of that led to decrease of the creativity and disability for team-work, because of the tenet of determined view point without paying attention to the competence and argumentation. Each initiative was cut down and

that will de-motivate the able workers and encourage the ones who were incapable. The results from all of that caused management crisis, much distrust, the impossibility to stimulate the real values, uncontrolled consumption and waste of capital, indiscipline and stagnation in the organization.

The unfulfilled ambitions of some individuals transformed into envy. There are often signs of envy in the politics, education and science. The envy causes personal conflicts, unavailing waste of the power and disturbs the teamwork, which is not liked a lot among people. Beside our individualism, in important moments we are willing to put through our activities and the results in the end are bigger than it was expected.

The problem with our mentality is that we persistently and irrationally go against the external mental types, instead of analyzing and using them wisely. But when we accept a new mental model without detailed analysis, we easily and unwisely give up our own model. Our basic problem is that we do not know how to successfully connect the traditional values with the cultural values, and with the current west values that rule the world.

The TQM strategy enabled the Japanese to connect the traditional mental model with the new mental model of their traditional east culture, which contains values from the west civilization. We find out from Macedonian people that live and work abroad, that they have successfully collided their talent and individual mental potential with world methods and techniques, which bring us to our big unused potential.

A big part of the Macedonian educational institutions are based on the traditional approach and because of that there is a need to reorganize the work/reengineering of the work (Mitreva, 2010), which means usage of the most important aspect – organization that learns.

Necessity of Acceptance of the new TQM Philosophy in Macedonian companies

Macedonian companies must build new management system based on the TQM strategy which requests less time and money, and can have the same or bigger effects than the big investments into equipment (Beskese at al. 2001:70).

In order to survive in the 21 century, the organization has to have three strategies:

- fast improvement and balancing the quality of the existing services and processes;
- reduction of certain parts of the organization with the aim to decrease the costs of the existing services and processes;
- expansion of certain parts of the educational institution and development of new services and elements.

The first strategy represents constant improvement, while the other two represent sudden improvement and new values.

One of the biggest changes that the new TQM strategy requests in our companies is to change the mentality and to get rid of the old habits and transitional syndrome. That means, that the positive characteristics of Macedonians must be developed, and the modern mental type must be accepted.

No one reaches his/her goal if he/she wants to expand his/her knowledge, because the same moment that we reach some top we find out that there are more higher mountains that have to be conquered. This thought should be used by the managers in Macedonian educational institutions, who have to be ready for more learning and to teach their employees the same thing.

Conclusion

The conclusion is that to run successfully a Macedonian companies will be possible only through: creating business culture from the traditional values and standards, and connecting it with the trendy west values that rule the world; good management teams; good cooperation with the employee; clear standards for rewarding and punishing; clear commands and precise instructions, instead of negotiations with the employees; and all of that is possible only with managers that use the TQM strategy.

Innovative Issues and Approaches in Social Sciences (IIASS)

Editorial correspondence

All correspondence or correspondence concerning any general questions, article submission or book reviews should be addressed to info@iiass.si.

Subscription to IIASS

IIASS is available free of any charge at http://www.iiass.com under . You can sign in for a free newsletter.

Advertising

Please find our advertising policy at http://www.iiass.com For additional questions or inquiries you can contact us on e-mail info@iiass.si.

Language

The objective of academic journal is to provide clear communication with an international audience. Style and elegance is secondary aim. In this manner we allow US and UK spelling as long as it is consistent within the article. Authors are responsible for language editing before submitting the article.

Notes for Contributors

Please refer to www.iiass.com for detailed instructions. Sample layout can be downloaded from http://www.iiass.com/uploaded articles/IIASS layout.doc

Scope:

IIASS is electronic peer reviewed international journal covering all social sciences (Political science, sociology, economy, public administration, law, management, communication science, etc.). Journal is open to theoretical and empirical articles of established scientist and researchers as well as of perspective young students. All articles have to pass blind peer review.

IIASS welcomes innovative ideas in researching established topics or articles that are trying to open new issues that are still searching for its scientific recognition.

Copyright

IIASS is exclusively electronic peer reviewed journal that is published three times a year (initially in January, May and September). IIASS is an open access Journal under Attribution-NonCommercial CC BY-NC licence (see http://creativecommons.org/licenses/). This license lets others remix, tweak, and build upon your work non-commercially, and although their new works must also acknowledge you and be non-commercial, they don't have to license their derivative works on the same terms.
