Abstract

Re-engineering is a relatively young art that examines the change and reorganization of existing business processes in the organization to change the present, be desired situation and the achievement of radical improvement process organization. For very important significance to have these processes in the overall work of the organization, in this paper first define reengineering process. Then explains the process of implementation the BPR by explaining the link between BPR and managers, employees, consumers and application of information technology. On the other side, the re-engineering processes helping them to managers in the selection process and the decision about what actually needs to be introduced to the organization.

Key words: business processes reengineering, implementation, employees, managers
