#### Abstract Body:

##### Introduction:

Despite great advances in diagnosis and therapy of cancer, he remains a major cause of death in developed countries. Although surgery and chemotherapy to successfully treat some types of cancer is necessary in these patients include a special diet during treatment and afterwards. Because there are many substances that cause.

##### The Aim:

The purpose of this paper is to present diet in onkolshkrite patients depending on their stage of disease and involvement of tissues and organs. To make a comparison between oncology patients who were under special diet after treatment and oncology patients who were not under any diet after treatment.

##### Materials and Methods:

Our information and success stories come from journals written by doctors and people who after successful medical treatment subject under a special diet and wanting to share their experiences with others.

##### Results:

Analyzed 10 patients who were under special diet and 10 patients who after treatment not care about their diet. In 4 of 10 patients who do not care about the diet for less than one year has appeared leftover whereas in those patients who are at special diet during one year only one patient having a relapse occurred.

##### Conclusion:

From the collected data and the analysis can be concluded that diet directly vlijaae in recurrence of disease in oncology patients.

**Keywords:** cancer, nutrition, oncology ill.
