25  
20000 Years

Small steps. Big traces.

***Dear Ladies and Gentlemen,  
Dear Colleagues,  
Dear Guests,***

On behalf of the Organizing Committee and in my capacity as Chairman of the Scientific and Technical Union of Mining, Geology and Metallurgy I am pleased to welcome all the participants in **VII INTERNATIONAL GEOMECHANICS CONFERENCE**.

This scientific forum will take place for the seventh time in a row which shows its importance and prestige. This year the conference will be focused on Innovative Methods in Geomechanics. The topics cover the whole range of fundamental issues for the formation of stressed and deformed state of the rock mass, research methods for assessment, ecological issues and environment protection.

The IGC 2016 Conference offers an excellent opportunity for the international and local participants to exchange the experience, to share innovation, and to progress professional skills. In the conference this year involved colleagues from Belarus, Bosnia and Herzegovina, Bulgaria, Macedonia, Romania, Russia, USA, Slovakia, Serbia and Ukraine. The significance of the International Conference on Geomechanics is determined by the interest in her and the great activity of the scientific community in geomechanics worldwide.

The results from the studies discussed during the conference are a possibility for application of the geomechanical methods related to the development and utilization of the underground space in the mining industry, the construction, the industrial and public buildings, the transport facilities, etc.

It is our hope that you have been able as well to get a touch of our capital city, our Country, and the Bulgarian people, perhaps, with the intent to visit us again in 2018 on the occasion of the next **VIII INTERNATIONAL GEOMECHANICS CONFERENCE**.

***I wish you all fruitful work and good luck!***

**Prof. Dr. Tzolo Voutov**

Геотрейдинг АД е търговско дружество, създадено през 2005 г., като част от групата Геотехмин.

Компанията притежава права за представителство и продажба на продукти в следните направления:

- Строителна и минна техника;
- Гуми;
- Горива и смазочни материали;
- Резервни части и консумативи.

Дружеството разполага и с цех за производство на хидравлични маркучи.

През 2015 г. дружеството отвори два сервиза с марката **PROAUTO**

в София и Етрополе за обслужване на леки, товарни автомобили, специализирана и строителна техника, както и за директни продажби.

**MINSTROY HOLDING JSC**

**leader in the lead and zinc ore extraction**

The company “Minstroy” was founded pursuant to decree No. P-37 of the Council of Ministers of 1952 as a specialized mining and construction organization for accelerated construction and commissioning of raw material and energy facilities in the country.

**In its 60-year history, the company has built:**

- All mining and energy enterprises in the country;
- More than 150 mines;
- Over 20 factories for preparation, processing and enrichment of raw materials extracted;
- More than 250 coal mining facilities;
- The highway tunnels “Trajanovi Vrata” and “Vitinya”;

**The following facilities are also a work of the Holding:**

- The underground infrastructure of housing estate “Obelya” and housing estate “Druzhba”;
- The main passable heat transfer collectors in Sofia;
- The first metro section from housing estate “Obelya” to housing estate “Lyulin”
- The tram tunnel under “Dragan Tsankov” Blvd.;
- Over 1000 km. long-distance pipelines for oil and gas;
- More than 100 pumping stations, reservoirs and facilities for petroleum products;
- Over 600 km. of hydro tunneling, water and sewage systems;

**Minstroy Holding JSC:**

- Manages and operates lead, zinc and silver mines in the Rhodope extraction region;
- Finances, built and manages its own electricity production capacities from renewable energy sources, mainly photovoltaic systems and small hydroelectric systems for over 20 MW;

# ЕКСПЛОЗИВПРОГРЕС - ГТМ ЕООД

Гр. София, ул. "Люлин планина" N9  
e-mail: office@explosiveprogress.eu  
web: www.explosiveprogress.eu

тел: (+359 2) 902 65 20  
тел/факс: (+359 2) 902 65 27  
mobile: (+359) 888 397 205

Основано през 1999 г., дружеството "Експлозивпрогрес-ГТМ" ЕООД е специализирано в консултантски и инженерингови услуги в областта на пробивно-взривните работи.

"Експлозивпрогрес-ГТМ" ЕООД развива търговска дейност, която включва продажба на взривни вещества и средства за взривяване. Дружеството е изключителен дистрибутор за България на произведените от взривна фабрика "Елаците" водоустойчиви емулсионни взривни вещества.

"Експлозивпрогрес-ГТМ" ЕООД проектира и изпълнява пробивно-взривни работи, като осигурява и необходимите разрешителни.

## По задание на клиента дружеството извършва:

- Пробивно-взривни работи на кариери.
- Пробивно-взривни работи за прокарване на пътища, автомагистрали, пътни участъци, строителни площадки и други.
- Специални взривни работи.

## Мониторинг на взривни работи:

"Експлозивпрогрес-ГТМ" ЕООД разполага със съвременна апаратура и програмни продукти на водещи световни фирми като Geosonics и NOMIS, САЩ, MREL и WipWare, Канада.

Мониторингът включва:

- Извършване на сеизмични измервания при осигуряване на взривосеизмична охрана на сгради и съоръжения.
- Определяне на зърнометричния състав на взривена и/или натрошена скална маса.
- Измерване на скорост на детонация на взривни вещества в реални производствени условия.

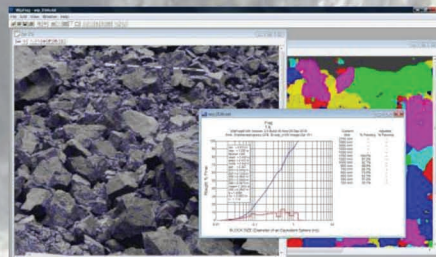

Апаратура за измерване на скорост на детонация на взривни вещества.

Апаратура за извършване на взривосеизмични измервания.

Водоустойчиви емулсионни взривни вещества и средства за взривяване.

Зърнометрична характеристика на взривена скална (минна) маса.

# **The FEDERATION OF THE SCIENTIFIC ENGINEERING UNIONS (FSEU)**

**in Bulgaria is a professional, scientific-educational, non-governmental, non-political non-profit association of legal entities - professional organizations registered under the Law on non-profit legal entities, whose members are engineers, economists and other specialists in the field of science, technology, economy and agriculture.**

**FSEU performed bilateral cooperation with similar organizations from many countries.**

**FSEU brings together 19 national associations - Scientific and Technical Unions (STU), 34 territorial associations, which have more than 15,000 professionals across the country.**

**FSEU is a co-founder and member of the World Federation of Engineering Organizations (WFEO).**

**FSEU a member of the European Federation of National Engineering Associations (FEANI), and a member of the Standing Conference of engineering organizations from Southeast Europe (CO.PICEE ), Global Compact, European Young Engineers (EYE). The Federation has the exclusive right to award the European Engineer (EUR ING) title.**

**Contact person:**

**Dr. Boyko Denchev, e-mail: [b.denchev@gmail.com](mailto:b.denchev@gmail.com)**

**1000 Sofia, 108 G.S. Rakovsky Str.**

**THE SCIENTIFIC AND TECHNICAL UNION OF MINING, GEOLOGY AND METALLURGY** is a voluntary, non-governmental, politically uncommitted, uncommercial professional association.

About 1800 scientists, engineers, technician and other specialist in the field of mining, geology and metallurgy participate in the Union. Many juridical persons from the country and abroad who are working in this field are members of this association. The Union is an association in private favour and realizes its activity in favour of its members. The Scientific and technical union of mining, geology and metallurgy is a regular member of the FEDERATION OF THE SCIENTIFIC ENGINEERING UNIONS.

14 regional organizations, 34 scientific-technical associations and clubs and 6 incorporated associations function within the Union.

There are 25 collective members at present - juridical persons from mining and metallurgical branches and geology.

Governing bodies of the Union are the General meeting, the Managing committee and the Control committee. The latter two are elected by the General meeting and are authorized for 4 years.

The Scientific and technical union of mining, geology and metallurgy cooperates on problems in these fields with **the Ministry of economy and energy, the Ministry of regional development and public works, the Ministry of environment and water, the Bulgarian chamber of mining and geology, the Bulgarian academy of sciences, the University of mining and geology "St. Ivan Rilski", the University of chemical technology and metallurgy, the Union of scientists in Bulgaria** and other organizations and firms very actively.

The Union is member of 19 related international social organizations and academies. The most important are:

- The World Mining Congress - WMC
- The International Society for Rock Mechanics - ISRM
- The Academy of mining sciences of Russia
- The International Academy of ecology & life protection sciences
- The International Academy of mineral resources

The Balkan associations:

- The Balkan union of metallurgists
- The Balkan committee of mineral processing
- The Balkan geophysical association
- The Balkan association of mining experts "BALKANMINE" and others.

The Union is a co-founder of the publishing house "Earth93" and a co-publisher of the journal "Mining and geology". Useful information about national and international publications and activities in these fields is accumulating and exchanged in the Secretariat of the Union.

National and international scientific-technical publications and literature keep coming in (the journal "Mining and geology", "Geology and mineral resources", the magazine "Science and society", "Mining Journal").

The Union is the basic organizer of scientific-technical conferences, symposia, discussions and other initiatives on national and international level. The union members participate in the preparation and discussion of bills, normative and others documents in the field of mining and metallurgical branches and geology.

By its national and regional structures the Union is ready for collaboration with international and national authorities and organizations on problems of geology, mining and metallurgy.

# ORGANIZING COMMITTEE

## **Chairman:**

Prof. Dr. Tzolo Voutov

Chairman, Scientific and technical union of mining, geology and metallurgy

## **Honorary Chairman:**

Prof. DSc Nikolai Nikolaev

Chairman of the National Committee of Rock mechanics

## **Deputy Chairmen:**

Mag. Eng. Shteryo Shterev

Vice-chairman, Scientific and technical union of mining, geology and metallurgy

Prof. Dr. Lyuben Totev

Rector, University of mining and geology "St. Ivan Rilski"

## **Scientific Secretaries:**

Dr. Eng. Kremena Dedelyanova

Secretary general, Scientific and technical union of mining, geology and metallurgy

Dr. Eng. Konstantin Georgiev

Honorary member of the ISM

Dr. Juliyan Dimitrov

University of mining and geology "St. Ivan Rilski"

## **Organizer:**

Dr. Krassimira Arsova

Scientific and technical union of mining, geology and metallurgy

## **Members:**

Mag. Eng. Andon Andonov

Executive director, Maritza-Iztok Mines JSCo.

Prof. Dr. Bozhidar Bozhinov

University of mining and geology "St. Ivan Rilski"

Prof. Dr. Valeri Mitkov

"Videx" JSCo.

Dr. Eng. Vladimir Genevski

Scientific and technical union of mining, geology and metallurgy

Prof. DSc. Georgi Shoushoulov

Scientific and technical union of mining, geology and metallurgy

Mag. Eng. Dancho Todorov

Executive director, "Niproruda" JSCo.

Mag. Eng. Delcho Nikolov

Executive director, "Assarel Medet" JSCo

Prof. Dr. Dimitar Anastasov

University of mining and geology "St. Ivan Rilski"

Prof. DSc. Dimcho Iossifov

Scientific and technical union of mining, geology and metallurgy

Mag. Eng. Dobri Tzvetkov

Executive director, "Ellatzite-med" JSCo.

Mag. Eng. Dragomir Draganov

General director, "Ellatzite-med" JSCo.

Prof. Dr. Ivan Markov

Rector, University of architecture, building and geodetics

Dr. Eng. Ilia Garkov

Executive director, "Dundee Precious Metals

Chelopech" EAD

Prof. Dr. Lachezar Tzotzorkov

Chairman, Bulgarian chamber of mining and geology

Prof. Dr. Mihail Vulkov

Chief of Department, University of mining and geology "St. Ivan Rilski"

Prof. DSc. Nikolai Valkanov

Chairman of the National committee of mine surveying

Assoc. Prof. Dr. Pavel Pavlov

University of mining and geology "St. Ivan Rilski"

Prof. Dr. Petar Daskalov

Scientific and technical union of mining, geology and metallurgy

Assoc. Prof. Dr. Stanislav Topalov

University of mining and geology "St. Ivan Rilski"

Prof. Dr. Stoyan Bratoev

Executive director, "Metropolitan" JSCo.

Mag. Eng. Huben Hubenov

Executive director, "Minproekt" JSCo.

## GEOFYSICAL AND GEOMECHANICAL CHARACTERISTICS OF GABBRO FROM LOCALITY PANTELEJ, MACEDONIA

Krsto Blazev<sup>1</sup>, Blagica Doneva<sup>1</sup>, Todor Delipetrov<sup>1</sup>, Gorgi Dimov<sup>1</sup>, Marjan Delipetrov<sup>1</sup>, Zoran Panov<sup>1</sup>

<sup>1</sup>University of Goce Delcev, Faculty of natural and technical sciences, Stip, krsto.blazev@ugd.edu.mk

### ABSTRACT

*The paper represents the geophysical and geomechanical characteristics of gabbro from the locality Pantelej in Macedonia. This gabbro is wide spread and it intruded in Paleozoic chlorite - sericite and graphite schists. In the area of the monastery Pantelej, above the gabbro lay sandstone and limestone from Upper Eocene and in some parts are intruded by the products of Kratovo - Zletovo volcanism. The age of the gabbro is determined as Jurassic.*

*Analysing the geophysical characteristics, suitable methods for their exploration are seismic methods, due to relative large velocities of propagation of the elastic waves in gabbro.*

*From geomechanical aspect, gabbro is very suitable for application in civil engineering due to its strength and elastic features, and its colour gives possibility to use it as decorative material.*

**Keywords:** gabbro, geomechanical characteristics, geophysical features.

### Introduction

In the part of Eastern Macedonia, where the exploration terrain is located, geological composition of the terrain is very complex, from the aspect of lithology and tectonic. This part of the country, according the tectonic regionalization, belongs to Eastern Macedonian zone and smaller part belongs to Vardar zone. The contact between the Eastern Macedonian zone and Vardar zone is clearly marked with profound fault that separate Vardar zone from Serbian - Macedonian mass. This deep structure is channel for magma masses which additionally complicate complex lithological structure of this region.

Conducted geological investigations, especially from Geological Institute of the Republic of Macedonia, limited the gabbro complex and relatively detailed located the complex of gabbro in the area of Pantelej. With these investigations are obtained primary physical and mechanical, chemical, petrologic and mineralogical data for gabbro.

### Geological features of gabbro

Gabbro occupies large area in the region of monastery Pantelej and Bogoslovec near Stip. Gabbro near Pantelej occurs as large masses between the vilages Stalkovica and Nivicani. They intruded in chlorite - sericite and quartz - graphite schists from Paleozoic. In the area of the monastery Pantelej, above the gabbro lied Upper Eocene sandstone and limestone, and the other parts are intruded with quartz - monzonite or covered with hornblende - augite - biotite andesite. They have grey - green color, massive texture with large crystals of colored components. Often are crushed and altered and locally are limonitized, kaolinized and uralitized. The structure is hypidiomorphic granular. In the composition are present basic plagioclases which are partialy or fully transformed into epidote - coisite. Primary pyroxene is fully transformed in secondary amphibole, but also are present relics of primary crystals of monoclinic pyroxene. Lower presence show other colored minerals such as olivine which is serpentinized [1, 2].

Accessory minerals are leucoxene, rarely apatite and tremolite.

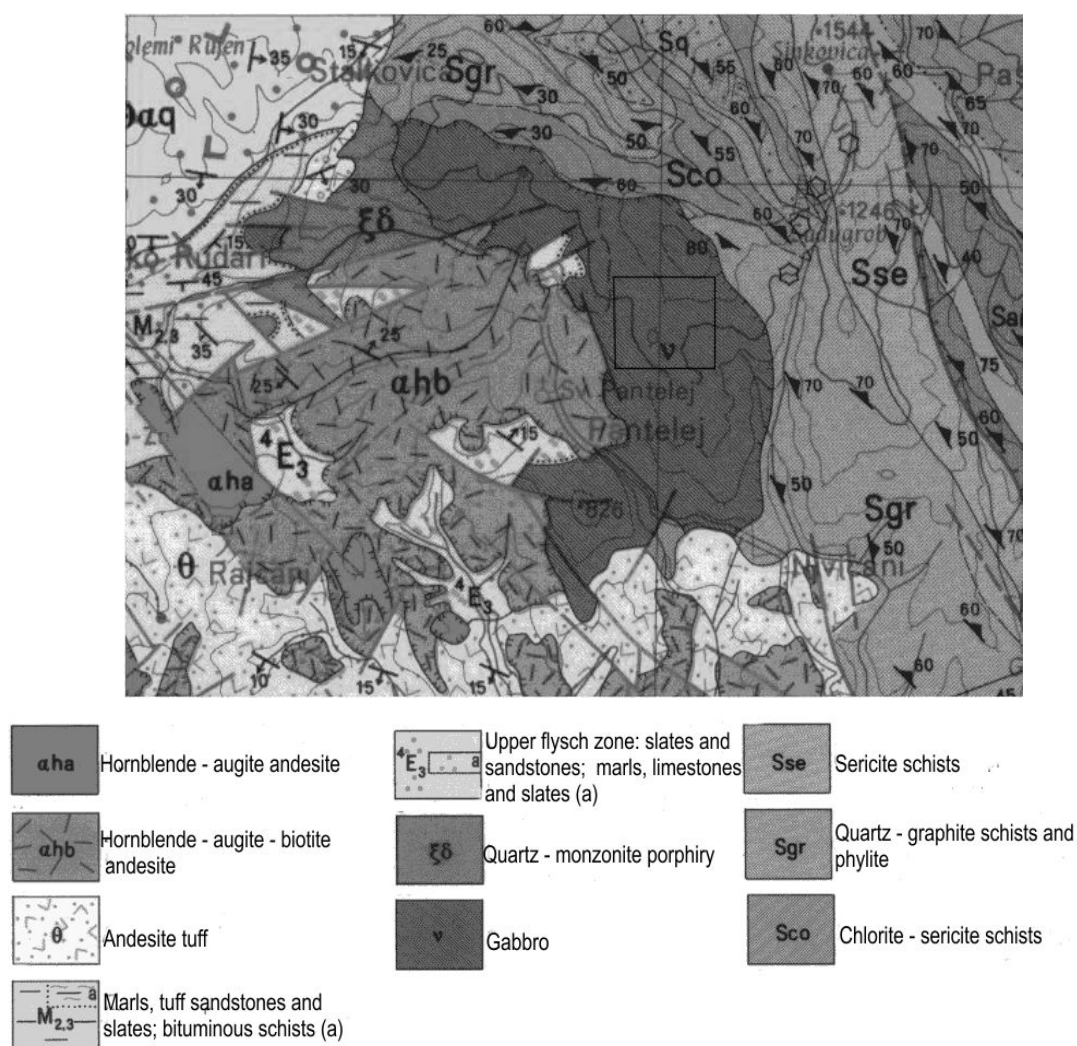

Fig.1: Geological map of the investigation area

### Chemical, physical and geophysical parameters of gabbro

Examinations from chemical aspect showed that gabbro has the following composition:

<b>SiO<sub>2</sub></b>	45,14%	<b>MgO</b>	2,91 %
<b>TiO<sub>2</sub></b>	0,26 %	<b>CaO</b>	15,80 %
<b>Al<sub>2</sub>O<sub>3</sub></b>	24,50 %	<b>Na<sub>2</sub>O</b>	0,71%
<b>Fe<sub>2</sub>O<sub>3</sub></b>	3,20 %	<b>K<sub>2</sub>O</b>	0,69%
<b>FeO</b>	4,59%	<b>H<sub>2</sub>O</b>	2,50%
<b>MnO</b>	0,22%		

Conducted research for determination the gabbro density with analysis of samples from different locations showed that density varies within 2,85 - 3,12 g/cm<sup>3</sup> or average density of 2.98 g/cm<sup>3</sup>. Relatively wide density interval for gabbro is result of the different degree of cracking of the rock massif. From the investigations is concluded that from the surface in depth the density increases, and the degree of cracking decreases.

### Thermal characteristics of gabbro

Rock masses are characterized by coefficient of heat conductivity (k), coefficient of temperature conductivity (a) and specific heat (c).

The coefficient of heat conductivity (k) shows the amount of heat passing through unit area during the unit time, when the temperature drops 1°C per unit length. It is denoted by (k), and is expressed in units W/mK.

Specific heat (c) shows the amount of heat, expressed in calories, and need to heat unit mass for 1°C. The dimension of the specific heat is kJ/kgK. Thermal features of gabbro are presented in table 1. [3]

Table 1: Thermal features of gabbro

Rock	Thermal conductivity (k) [W/mk]	Temperature conductivity (a) [10 <sup>6</sup> m <sup>2</sup> / s]	Specific heat (c) [kJ/kg C°]
Gabbro	1.7 - 2.9	0.78 - 1.3	0.68 - 1.0

### Electrical characteristics of gabbro

Conducted in situ investigations of geoelectrical aspect showed the following results: the specific electrical resistivity of gabbro is within the interval  $1 \times 10^6$  -  $1,5 \times 10^8 \Omega/m$ . [3]

Geoelectrical measurements were performed with Terrameter SAS 1000.

### Magnetic characteristics of gabbro

Analyses made for the magnetic properties of gabbro showed that magnetic susceptibility is in range 0,0055264 to 0,51496 expressed in SI units [m<sup>3</sup> / kg]. These data and the presence of minerals of iron and titanium, which have significant presence in the surrounding, give possibility for application of geomagnetic method in the explorations of gabbro. [3]

### Seismic characteristics of gabbro

Seismic investigations are dominated as geophysical method in defining the geomechanical parameters of the rock masses, because, unlike other geophysical parameters, these directly indicate the condition of the rock masses in relation to cracking, density and its elastic properties. Conducted explorations showed that seismic velocities of gabbro depend on more parameters such as degree of cracking, depth of dipping and its elastic properties. In table 2 are given velocities of seismic waves in gabbro in function of pressure.

Table 2. Average wave velocities as a function of pressure

Gabbro	200 MPa		400 Mpa		600 Mpa		800 Mpa		1000 Mpa	
	V <sub>p</sub>	V <sub>s</sub>	V <sub>p</sub>	V <sub>s</sub>	V <sub>p</sub>	V <sub>s</sub>	V <sub>p</sub>	V <sub>s</sub>	V <sub>p</sub>	V <sub>s</sub>
	7.138	3.862	7.200	3.888	7.241	3.905	7.273	3.918	7.299	3.929

### Geomechanical characteristics of gabbro

Regarding the use of rocks as building stone, especially important are geomechanical characteristics, and when it comes decorativeness should not be underestimated and the color and the possibility of obtaining a high glossy surface. On the investigating terrain was applied seismic method in order to define the degree of cracking and the zone of more compact rock massif that may be of interest to produce blocks that would have a commercial effect.

Collected and processed data showed that degree of cracking of the gabbro massif is not the same everywhere. From analyzing the fissure systems can be concluded that on the area north of the monastery Pantelej dominated two systems of cracks with dip elements  $355/50^\circ$  and  $60/30^\circ$ , and present are a few less pronounced crack systems. [4]

The end northwestern part of the massif, south-east of the village Stalkovica dominated system of subvertical to vertical cracks with orientation  $245-65^\circ$ .

The analyzes indicate that the surface cracking of gabbro is relatively large and varies within the range from 5 to 15 m in depth and there are fissure systems inside gabbro massif that differ in intensity and dip elements.

On the investigating area was conducted the method of measurement with georadar with 400 V transmitter and antenna system of 100 MHz. With this equipment were recorded four georadar profiles to depth of 24 m, and recording is performed with the array of profile points on every half meter (fig. 2). The processing of measurements was with the software "EKKO\_View Deluxe".

Fig.2: Geological map of the investigation area

Based on the results from geophysical explorations, on gabbro massif was made regionalization (vertical and horizontal) and were separated two zones:

- zone with relatively compact gabbro and
- zone of relatively cracked and crushed gabbro.

In the zones of relatively compact gabbro, i.e. zones A, A<sub>1</sub>, A<sub>2</sub>, and A<sub>3</sub> rock mass is well preserved, and in the zone with relatively cracked and crushed gabbro, rock mass is very cracked and crushed and this gabbro is practically unproductive and is not part of further investigations. [4]

Zone A appears on profile 3 on the west edge of the massif. Its area is around 1500 m<sup>2</sup>. Surface cracking of gabbro in this zone is within 6 - 15 m.

Zone A<sub>1</sub> occur on profiles 1, 2 and 3. Total area is about 1700 m<sup>2</sup>. Surface cracking is 6 - 12 m.

Zone A<sub>2</sub> is registered on the profiles 1, 2 and 3 with total area of 1800 m<sup>2</sup> and surface cracking form 6 to

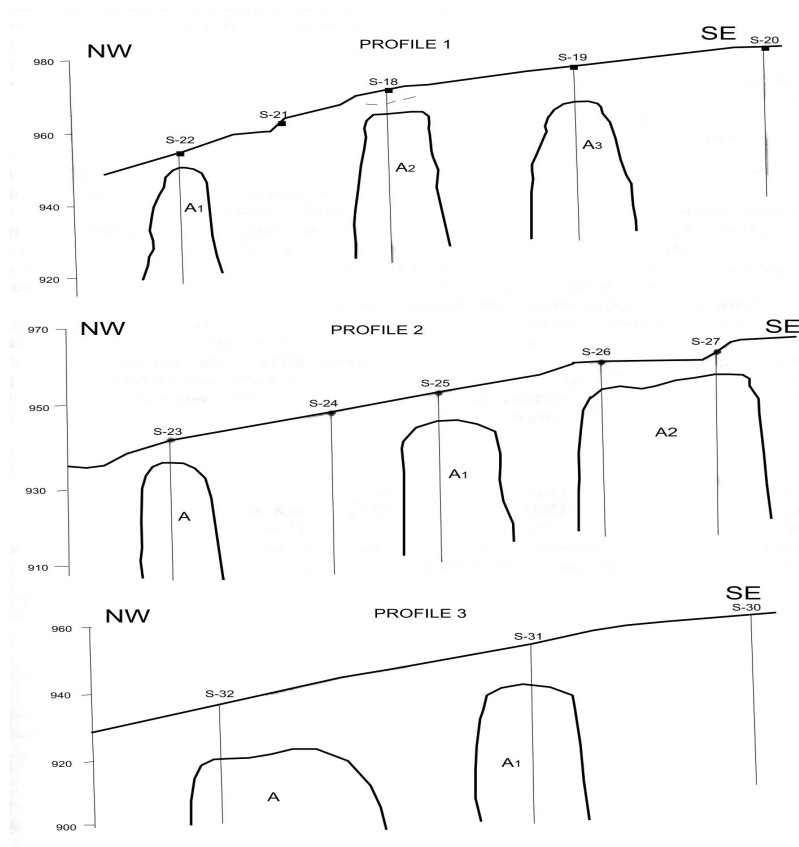

10 m.

Zone A<sub>3</sub> is present in the edge east part of the gabbro massif and appears on the profiles 1, 2 and 3. Its area is 650 m<sup>2</sup>. Surface cracking is within 6 - 10 m.

These data showed that on the studied part of the gabbro massif with total area of 20000 m<sup>2</sup>, zone of relatively compact gabbro covers 5650 m<sup>2</sup>.

*Fig. 3: Horizontal regionalization of gabbro massif*

*Fig. 4: Vertical regionalization of gabbro massif*

**Proceedings of the VII International Geomechanics Conference**  
**27 June – 01 July 2016, Varna, Bulgaria**

From the conducted field and laboratory examinations of the gabbro massif on locality Pantelej, we can separate crushing as a very important geomechanical characteristic of gabbro (table 3) which is of special interest in building industry. [5]

*Table 3. Coefficient of empirical criterion of fracture, according Hawk and Brown, 1980*

<b>Gabbro</b>	Monolite without cracks <b>Q = 500</b> <b>RMR = 100</b>	Excelent quality, unchanged monolite <b>Q = 100</b> <b>RMR = 85</b>	Very good quality, cracks on 1 - 3 [m] <b>Q = 100</b> <b>RMR = 85</b>	Good quality, cracks on 0.5 - 1 [m] <b>Q = 1.0</b> <b>RMR = 44</b>	Poor quality, cracks on 30 - 50 [cm] <b>Q = 0.1</b> <b>RMR = 23</b>	Very poor quality, cracks on 1 - 5 [cm] <b>Q = 0.01</b> <b>RMR = 3</b>
	m = 25	m = 12.5	m = 2.5	m = 0.5	m = 0.13	m = 0.025

**Conclusion**

Gabbro rock massif on the exploration locality show high quality of physical - mechanical characteristics and as a material (buffer and granulate) it can be used in civil engineering. It is for the fissured surface layer of the investigation area, and under the surface, on depth above 6 m is possible exploitation of blocks which would be used for creation of plates and elements of interest for construction of monuments and decorative building stone.

Physical - mechanical characteristics show that built objects, monuments will have stabile properties for relative long time period, as well as stabile features of quality and color.
