Aim:

The aim of this study was to demonstrate the use of a fixed and mobile prosthetic supplement combined, to compensate for retention elements, *improve the stability of the prosthesis, better aesthetic appearance, better hygiene, periodontal protection and better caries protection.*

Material and method:

For this purpose, three fixed combined prosthesis were set up to several different patients and were monitored for a certain period and compared with other patients who only had a fixed or mobile prosthesis.

Conclusion:

The conclusion is that capacities with combined fixed-line prosthetics benefits have a lower strain on *natural teeth*. Common accessories connect the bridge and the partial prosthesis. This link is invisible that provides a good *aesthetic* result. The mobile prosthetic can be removed and maintained.
