SJR

2008201020122014201620180.070.140.210.280.194 (2011)

The SJR is a size-independent prestige indicator that ranks journals by their 'average prestige per article'. It is based on the idea that 'all citations are not created equal'. SJR is a measure of scientific influence of journals that accounts for both the number of citations received by a journal and the importance or prestige of the journals where such citations come from. It measures the scientific influence of the average article in a journal, it expresses how central to the global scientific discussion an average article of the journal is.

Year	SJR
2008	0.100
2009	0.240
2010	0.199
2011	0.194
2012	0.192
2013	0.133
2014	0.225
2015	0.201
2016	0.125
2017	0.192
2018	0.204
2019	0.239

Citations per document

Cites / Doc. (4 years) Cites / Doc. (3 years) Cites / Doc. (2 years)
 2000 2003 2006 2009 2012 2015 2018 0.10.20.30.40.5

This indicator counts the number of citations received by documents from a journal and divides them by the total number of documents published in that journal. The chart shows the evolution of the average number of times documents published in a journal in the past two, three and four years have been cited in the current year. The two years line is equivalent to journal impact factor™ (Thomson Reuters) metric.

External Cites per Doc

Cites per Doc

200020032006200920122015201800.250.5

Evolution of the number of total citation per document and external citation per document (i.e. journal self-citations removed) received by a journal's published documents during the three previous years. External citations are calculated by subtracting the number of self-citations from the total number of citations received by the journal's documents.
