In cooperation with:

International Network of Sport and Health Sciences (INSHS, France)

Faculty of Sport and Physical Education, University of Niš (Serbia)

University Sport Center and Faculty of Educational Science at Goce Delchev University (Shtip, North Macedonia)

WHAT IS THE EVENT ABOUT?

Sustainability is about working collaboratively to create a world where everyone can thrive. It means protecting our social, economic and cultural values for future generations, and caring about the quality of life in a peaceful world. However, in present times we have to face immense, complex challenges such as climate change, social injustice, economic inequality, and insecurity. We have a fragile world with multiple global dangers. Successful sustainability strategies, programs, and projects initiations at different levels and areas work toward balanced and ethical solutions that are not only environmentally sound, but also economically viable and socially just. A **Sustainable University Campus** defines sustainability in an inclusive way, encompassing health, social justice, and secure livelihoods as well as safe environments for students, staff and locals. University campuses should be safe, attractive, „smart places” where eco-friendly environments, health-conscious services, digital solutions, and education combine to promote sustainable practices and opportunities. A **Sustainable University Sport Campus** concept should offer goal-oriented opportunities for HE institutions that run sport study programs and/or provide a vibrant university sport life, to take the lead in re-defining their outdoor and indoor facilities and infrastructures and develop new paradigms for delivery and support. This can be done by creating smart solutions and sustainable services to meet environmental, social, and economic needs of students, staff, and the local population.

THE GOALS THE WORKSHOP ARE:

to define the criteria of sustainable operation for university sport campuses and services;

to discuss ideas and to share best practices;

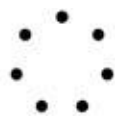

to introduce innovative technologies and methods;

to create a network of universities that will collaborate and exchange best practice experiences related to sustainable university campuses and activities.

OUTCOME OF THE WORKSHOP:

„A Guide for a Sustainable University Sport Campus” – based on the presentations, discussions, and potential project cooperations.

See you at the event!
