Faculty of Medical Sciences, "Goce Delcev" University – Stip, North Macedonia

- The drug is available in one strength: 6 mg/0.05 mL. A healthcare professional will give Beovu as an injection. You'll most likely receive the drug once a month for the first three doses, then once every 8 to 12 weeks.
- The advantage of beovu is that it is rarely used.
- It is with an individual applicator for each patient that the possibility of infection is smaller.
- Quickly absorbed in the eyes .
- Vision improvement is faster than thermal laser treatments

Prevalence of visual impairment in patients and eyes at 2 years<sup>1\*</sup>
