PREFACE

“The whole purpose of education is to turn mirrors into windows.”
Sydney J. Harris

Dear authors of the papers and readers,

we are entering an era in which modern approaches to education are key to developing the competences that students and teachers will need in the future. Effective teaching is based not only on the transmission of knowledge, but also on the creation of a stimulating environment for learning and the development of soft skills such as social and emotional intelligence, communication skills, empathy, resilience, critical thinking and overcoming stress and anxiety. These skills in particular are now fundamental to the holistic development of the individual.

As Sydney J. Harris says: *“The whole purpose of education is to turn mirrors into windows,”* we want to stimulate a transformation of education in this spirit - from introspective mirroring of rigid approaches to an open view through the windows of innovative methods and successful solutions to contemporary challenges. Sharing effective and innovative approaches to teaching is an important part of step towards co-creating the future of education based on a broader vision and understanding. of the world around us.

The authors of the papers delved into innovative methods of teaching and evaluation of knowledge and presented the concrete challenges they face. With new experience and knowledge, we will be much more ready to face the challenges of an increasingly dynamic and digitalised education landscape.

An international conference is an opportunity to explore together key issues that are at the forefront of contemporary education: soft skills development, innovative approaches to teaching and the use of modern technology. These issues we address are not just starting points for theoretical debate, but are aimed at finding concrete solutions to everyday challenges in classrooms.

The path someone else has taken can help us reach our goals rapidly and more effectively. We believe that the exchange of good practice and new ideas will contribute to the development of students who will be more motivated, creative and successful in their learning.

The Book of Papers brings together **92 scientific and professional papers** and **32 abstracts of lectures** presented in the international conference sessions and round tables.

We look forward to co-creating the future of education together.

Sincerely,

*Programme and Organization Committee
of the International Conference EDUchallenge, February 2024*
