## ADENOMATOID ODONTOGENIC TUMOR OF MAXILLA: A CASE REPORT

IRENA STOJANOVA, 1. Mirjana Markovska Arsovska, 2. Gordana Petrusevska 3

1. University Dental Clinical ss. Pantelejmon. Department of Oral Surgery and Implantology, Skopje, Republic of Macedonia

2. Faculty of Medical Sciences. University Goce Delchev Stip. Republic of North Macedonia

3. Faculty of Medicine, Ss Cyril and Methodius, Skopje, Republic of Macedonia

Adenomatoid odontogenic tumor (AOT) is a rare, benign tumor (3–7% of all odontogenic tumors), with slow growth potential and exceptionally low recurrence rate. The tumor is predominantly found in females in the second decade of life, involving the maxilla more frequently than the mandible. The tumor presents in three variants—intrafollicular, extrafollicular, and peripheral which are classified based on the location of the lesion. We report a rare peripheral case of AOT in a 71 year old female patient in a posterior region of maxilla. All types of AOT show encapsulation and benign behavior. The treatment of choice is conservative surgical enucleation with a very low recurrence rate.

**Keywords:** Adenomatoid odontogenic tumor, benign, maxilla, treatment
