**24th International Symposium and
Summer School on Bioanalysis (24ISSSB)**

July 5–14, 2026

Book of Abstracts

Organizer

Faculty of Chemistry, University of Vienna

Publisher

Institute of Analytical Chemistry, Faculty of Chemistry, University of Vienna

Summer school website

<https://cichnalab.univie.ac.at/news/ceepus/ceepus-summer-school-2026/>

Editor

Katharina Pühringer

Scientific Committee

Margit Cichna-Markl, Martin Schmid, Tamara Pajpanova, Tomáš Křížek, Nives Galić, Marija Jozanović, Ferenc Kilár, Anikó Takátsy, Attila Gáspár, Jolan Hársfalvi, Marina Stefova, Violeta Ivanova-Petropulos, Livia Uncu, Ewa Poboży, Gabriella Donáth-Nagy, Róbert Tötös, Radu Oprean, Gyöngyvér Mara, Marián Masár, György Juhász

Organizing Committee

Chair: Margit Cichna-Markl

Members: Katharina Pühringer, Andrea Hilbert, Martin Safránek

The authors themselves are fully responsible for the content of the abstracts.

ISBN: 978-3-200-11383-1

Opening remarks

Dear participants, dear students, dear colleagues,

It is our great pleasure to welcome you to the 24th International Symposium and Summer School on Bioanalysis at the Faculty of Chemistry, University of Vienna.

Bioanalysis is a rapidly evolving and highly interdisciplinary field. Progress depends not only on innovative methods and technologies, but also on the exchange of ideas across disciplines and generations of scientists. This Summer School aims to provide exactly this environment: a place for the exchange of ideas, discussing recent developments, and learning from one another through oral presentations, poster sessions, seminars and workshops, as well as informal discussions.

The Book of Abstracts presents contributions covering a broad spectrum of topics, providing valuable insights into current research and reflecting the scientific diversity of this meeting.

Beyond the scientific program, we hope that the Summer School will offer an enjoyable atmosphere for sharing experiences, building new connections, and strengthening existing collaborations.

We wish you an inspiring and successful Summer School and hope that your time with us will be both scientifically rewarding and personally enriching.

A handwritten signature in black ink, reading "Peter Cichra-Bühl". The signature is written in a cursive, flowing style.

Chair of the Organizing Committee

Table of Contents

Lectures

Andrea Aigner: Development of a multi-barcode Next Generation Sequencing method for the analysis of plant species in food.....	1
Biljana Balabanova: ICP-MS based multi-elemental profiling of children's hair: a bioanalytical approach to assessing nutritional status and toxic metal exposure.....	2
Emese-Éva Bálint: Precision engineering of strigolactone pathways: a new bioanalytical perspective on designing soil symbiotic networks.....	3
Judith-Hajnal Bartha-Vari: Metal-affinity-based Immobilization of enzymes on single-walled carbon nanotubes.....	4
Andrea Bevilacqua: Identification of <i>Apis mellifera carnica</i> mtDNA in honey for product authentication and subspecies conservation.....	5
Magdalena Biesaga: Solid-phase extraction in food analysis - new solutions old problems....	6
Ede Bodoki: Mechanistic insights into mechanochemical molecular imprinting.....	7
Magdolna Casian: Strategies for improving aptamer screening efficiency for in vivo tumor targeting applications.....	8
Tímea Dérerová: Diastereomer resolution of phosphorothioate oligonucleotides in mixed-mode chromatography.....	9
Gabriella Donath-Nagy: What are people doing in the frame of Teaching and Learning Bioanalysis CEEPUS Network? A brief review of the scientific activity.....	10
Bogdan Feier: Electrochemical sensors for the characterization of pharmaceutical formulations.....	11
Ibolya Fülöp: Evaluation of different analytical methods in forensic toxicology.....	12
Nives Galić: Analytical techniques for characterization of cyclodextrin complexes.....	13
Attila Gáspár: The application of Taylor–Aris dispersion for the study of proteins.....	14
Lisa Großhaupt: HPLC-based forensic age estimation using aspartic acid racemization in human dentin.....	15
Paulina Gwardys: System for controlled release of active substances based on smart microgels.....	16
Gabriel Hancu: Doping in sport: from analytical arms race to landmark case studies.....	17
Jolan Harsfalvi: Biophysical characterization of clot retraction in platelet rich plasma of patients with primary anti-phospholipid syndrome.....	18

Bogdan-Cezar Iacob: Mechanochemically engineered recognition sites: reducing solvent, enhancing performance.....	19
Klementina-Imelda Ilkei: Detecting the relationship between gut microbiome, metabolome and type 2 diabetes.....	20
Maria-Bianca Irimies: Electrochemical aptasensors for healthcare applications.....	21
Violeta Ivanova-Petropulos: Selenium organic compounds and B-vitamins in red wine.....	22
György Juhász: Formation of charge-transfer complexes between aminopyridine derivatives and π -electron acceptors.....	23
Květa Kalíková: Separation of short phosphorothioate oligonucleotides' diastereomers in reversed phase liquid chromatography.....	24
Ferenc Kilár: Lipopolysaccharidomics.....	25
Csenge Kis: Effect of cyclodextrin complexation on the simultaneous separation of insulin analogues.....	26
David Klarić: Advancing cinnarizine solubility: physicochemical insights into β -cyclodextrin complexation.....	27
Edgar Kmiolek: Use of spent coffee grounds as a biosorbent for metal ion removal from water.....	28
Tomáš Křížek: Analysis of psychoactive stimulants in pre-workout boosters by capillary electrophoresis with contactless conductivity detection.....	29
Paulina Luśtyk: Investigation of metabolic biotransformation pathways of selected antioxidants using <i>in vitro</i> models.....	30
Diana-Gabriela Macovei: Sustainable platform for direct electrochemical detection of ampicillin: leveraging biochar-based materials.....	31
Ioana Manea: Toward early detection of HCC: selection of Golgi Protein-73 DNA aptamers	32
Gyöngyvér Mara: Role of the omics in probiotic, prebiotic and postbiotic studies.....	33
Paul-Cristian Martian: The versatility of porous organic polymers.....	34
Marián Masár: Advances and innovations in microchip electrophoresis for bioanalysis.....	35
Ecaterina Mazur: The evaluation of dissolution profile and <i>in vitro</i> bioavailability of the combined pharmaceutical formulations for the hypopotassemia treatment.....	36
Silvia Melnic: Metal–Organic Frameworks (MOFs) in bioanalysis: from structure to analytical function.....	37
Ali Mhammad: Green chiral HPLC method development for pharmaceutical analysis.....	38

Mădălina-Elena Moisă: Metal-ion-affinity-based immobilized phenylalanine ammonia-lyase for the enantioselective synthesis of optically pure phenylalanines.....	39
Radu-Nicolaie Oprean: Student assessment and feedback as catalysts for bioanalysis program development: from data collection to curricular reform.....	40
Tamara Pajpanova: Multiple strategies for optimizing antimicrobial peptides to enhance antimicrobial activity.....	41
Renata Píplová: Optimization of CE–MS parameters for the analysis of amino acids and peptides.....	42
Jasmina Petreska Stanoeva: Chemical and metabolic adaptations of endemic metallophytes from the Allchar deposit under metal stress.....	43
Ewa Poboży: Biosorbents and their application for environmental samples.....	44
Galina Radeva: Soil microbiome as an indicator of disturbance in terrestrial ecosystems.....	45
Pál Salamon: Molecular epidemiology and clonal lineages of multidrug-resistant <i>Acinetobacter baumannii</i> isolates in a clinical setting.....	46
Martin G. Schmid: Examples for analysis of classic and new psychoactive substances.....	47
Ivona Sofronievska: Assessment of hydrophobic organic contaminants in Macedonian waters using silicone passive samplers.....	48
Fruzsina Sótér: Investigating the catalytic and size-modulating effects of ethanol on cochleate drug delivery vehicles.....	49
Ruben Szabó: Characterization of deamidation sites in intact insulin leveraging collision-induced dissociation-derived internal fragments.....	50
Anikó Takátsy: Host–guest interaction-based drug delivery systems.....	51
Ana-Maria Tătaru: Emerging strategies for bacteria detection – AI-enhanced electrochemical sensors.....	52
Róbert Tóth: NSAID drug consumption monitoring by LC-MS/MS using wastewater-based epidemiology.....	54
Livia Uncu: The use and importance of advanced instrumental methods in therapeutic drug monitoring.....	55
Livia Vida: Ketogenic metabolic therapy as an adjuvant strategy in glioblastoma: exploiting tumor metabolic vulnerabilities.....	56
Gaja Anna Wachowska: Metabolome analysis of maize and wheat.....	57

Posters

Jakov Babić: Investigating the Influence of Pr concentration on the structural development of doped ceria-based high-entropy oxides.....	58
Biljana Balabanova: Multi-analytical evaluation of soil-plant interactions in vineyards experimental fields under carbon farming practices.....	59
Laura-Edit Barabás: Decoding complexity: analytical control of a one-pot bi-enzymatic cascade for producing four valuable products.....	60
Vivien Bárdos: Assessment of membrane integrity and membrane–acceptor compatibility in PAMPA systems.....	61
Gala Bereš: Synthesis and characterisation of Copper(II) complexes with maltol as an oxygen-donor ligand.....	62
Ivan P. Bogdanov: From small molecules investigated as Factor XIIIa Inhibitors to biological target diversity.....	63
Elena Bogeve: Aromatic profile of grape and fruit brandies determined by GC equipped with flame ionization detector.....	64
Ariana-Ioana Brîndușoiu: Development of aptasensor for detection of Salmonella enteritidis	65
Maša Čačić: Analytical detection of selective androgen receptor modulators in products purchased online.....	66
Radu Cazacu: Bioanalytical monitoring of recombinant human growth hormone production during fermentation using RP-HPLC.....	67
Tímea Éva Csete: Sensitive analytical characterization of a multi-enzyme reaction cascade	69
Marinela Cvetanoska: Polyphenol diversity and BVOC patterns in endemic metallophyte <i>Viola</i> from Allchar.....	70
Valéria Czöpek: Antioxidant capacity and polyphenol content of meads in Slovakia.....	71
Kira Dakos: Non-muscle actinopathy-associated loss of function variants of actin modulate the reorganization properties of the actin cytoskeleton.....	72
Sonja Maria Fröstl: Geographic authentication of Waldviertel honey using HRM and pyrosequencing.....	73
Raluca Gog: Thermodynamic characterization of mechanochemically synthesized molecularly imprinted polymers using isothermal titration calorimetry.....	74
Stefanie Handl: Characterization and quantification of performance-enhancing stimulants in pre-workout supplements via GC–MS and GC–FID.....	75

Alexandra Hengerics Szabó: Visualization and ICT aided modeling in high school chemistry education.....	76
Jasna Hradski: Determination of active pharmaceutical ingredients and counterions in cardiovascular drugs by microchip isotachophoresis.....	77
András-Ernő Iszlai: Multi-enzymatic cascade for the synthesis of D-phenylalanine derivatives	78
Georgi I. Ivanov: Investigation of antioxidative properties of new generation MAO-B inhibitors	79
Ali Karimi: Authentication of acacia, lime, and chestnut honey by plant DNA barcoding and NMR analysis.....	80
Kolos Kelemen: Analysis of von Willebrand factor multimer distribution.....	81
Lucian Kereškenji: Mebendazole– β -Cyclodextrin inclusion complexes: a phase-solubility study.....	82
Stefan Kirovski: Trace-level determination of OCPs and PCBs in breast milk by optimized GC-ECD analysis.....	83
Emese Kovács: Phase inversion–driven approaches for Bijel formation using silica nanoparticles.....	84
Tea Kozić: Preparation and characterisation of Zinc(II) complexes with oxygen-donor heterocyclic ligand.....	85
Stefanie Kurath: Development of analytical methods for the early detection of new psychoactive substances (NPS)	86
Brunislav Matasović, Martina Šrajer Gajdošik, Marija Jozanović: Advanced polymer liquid membrane sensor for potentiometric detection of surfactants.....	87
Ali Mhammad: Designing a green chiral high-performance liquid chromatography method: proof-of-concept with crizotinib.....	88
Lucia Mikulcová: Stir bar sorptive extraction based on natural deep eutectic solvent.....	89
Gábor Áron Nagy: The effect of iron on plants.....	90
Sára Nagy: Comparison of the lipid and fatty acid composition of infant formulae in Hungary	91
Szidónia Nagy: Investigating the physiological and biochemical effects of PEG, sorbitol, and glycine seed priming under salt stress conditions.....	93
Iryna Nikitina: Authentication of honey from Ukraine and Poland through DNA analysis.....	94
Klaudia Nikoletta Pap: Assessing the elemental composition and biobased carbon content of chewing gum.....	95

Andreea Paraschivoiu: Fabrication of 3D-printed molecularly imprinted polymers for electrochemical–SERS sensors.....	96
Aleksandar Petrov: Chemical characterization of white and red wines from Ovche Pole region	97
Octavia Puchiu: Aptamer-based electrochemical biosensor for lipocalin-2 (LCN2) detection in breast cancer.....	98
Andreea-Diana Sale: Improving throughput in cocrystal screening of lutein by mechanochemical processing.....	99
Diana Maria Scrob: One enzyme with two catalytic functions. How human carbonic anhydrase II transforms α -haloketones into chiral halohydrins and epoxides?.....	100
Pece Sherovski: PCR–HRM-based authentication of berry species: influence of analytical and processing parameters.....	101
Monika Smetanová: Determination of acetaminophen by linear voltammetry using a boron-doped diamond electrode in a flow-through cell.....	102
Marlies Stein: Aphid DNA as a novel marker for honey authentication	103
Denisa Gabriela Stroia: Capillary electrophoresis approaches for the simultaneous analysis of dapagliflozin and metformin.....	104
Emília Sýkorová: RP-LC retention time prediction using mordred descriptors: benchmarking feature selection and descriptor domain variability across experimental conditions.....	105
Kornél Szabó: Determination of glycated haemoglobin (HbA1c) by CE-MS.....	106
Peter Szabó: Analysis of microcystin, a cyanobacterial toxin by capillary zone electrophoresis-mass spectrometry.....	107
Rita Szolláth: Influence of pharmaceutical polymers on the solubility–permeability interplay of curcumin.....	108
Sabina Tanasă: Electrochemical sensor designed for nitroaromatic compounds detection assisted by artificial intelligence.....	109
Barnabás Tóth: A low-cost magnetic separation platform for reproducible nanoparticle characterization.....	110
Alexandra-Ionuța Uilăcan: Decoding the elemental fingerprint of Romanian wines: a preliminary ICP-MS investigation.....	111
Marek Vaško: Evaluation of the long-term analytical performance of sensors equipped with boron- doped diamond electrodes.....	112
Mislav Vorkapić: Combined effects of medium composition and phenol oxidase induction in fungal nanoparticle biosynthesis.....	113

Aromatic profile of grape and fruit brandies determined by GC equipped with flame ionization detector

Grape brandy represents a significant segment of traditional production, with a pronounced economic and cultural value in Macedonia. It is an alcoholic beverage obtained by fermentation and distillation of grape mash from the cultivated vine *Vitis vinifera*. Moreover, fruit brandies are obtained by fermentation and distillation of their representative fruit mash. The quality of the brandy depends on several factors, such as: the variety of grape or fruit, climate, soil conditions, fermentation process, distillation time and technique, as well as the maturation period.

In this study, Various groups of aromatic compounds, including alcohols, esters, aldehydes, have been identified in 52 grape and 15 fruit brandies. All grape brandy samples were produced in domestic and traditional distillation conditions from various grape varieties, such as: Vranec, Temjanika, Muskat Hamburg, Rkaciteli, Smederevka, Afus Ali, Plovdiva, Prokupec, Traminac, Risling and Pinot Noir. The fruit brandy samples were produced from plum, apricot, peach, Red Delicious apple, Dzanka plum and Ohrid cherry. Additionally, samples of Mastika and Gin were included in the study. Analysis of aromatic compounds was performed using GC Equipped with flame ionization detector. The key aromatic compounds determined included acetaldehyde, esters (ethyl acetate, propyl acetate, ethyl lactate, isoamyl acetate), higher alcohols (1-propanol, 1-butanol, 2-methyl-1-butanol, 2-phenyl ethanol, hexanol, isobutanol) and methanol. Among the esters, ethyl acetate was dominant in fruit peach brandy. Regarding alcohols, 2-methyl-1-butanol was the most Prevalent in the Aromatic Temjanika grape brandy. High levels of methanol, as undesirable component, were observed in plum (Dzanka) brandy.

Keywords: grape brandy, fruit brandy, aroma compounds, GC-MS
