FOREWORD

*A forum **Safety for the Future** arose out from the idea and the need to see security problems as a whole, and yet separately, through a prism of scientists and experts in order to bring science, company practice and economy together. The forum contains several important events: the International Scientific Conference "Security and Crisis Management-Theory and Practice", an exhibition of tools and equipment, demonstration exercises and a round table with various topics.*

This year, for the seventh time, we are realizing a conference, with new elements of researching security phenomena in the field of crisis management, but also in all related areas. The fact is that the environment in which individuals and legal entities exist is increasingly complex, and the range of phenomena that affect the security of an entity is becoming wider. It is consist of familiar and unfamiliar circumstances. Managing those circumstances is possible to a certain extent, if there is an optimal and necessary quantum of knowledge. Hence, the knowledge is foundation on which is necessary to build capabilities of individuals and legal entities in order to be able to recognize, prevent and react on threats.

Crisis management has become everyday need, essential for survival of an individual, companies or society as a whole. It is more and more difficult to assess the risk of events with negative effects at the very beginning of their occurrence, and coping with negative consequences leaves harder effects on society. Scientific research of security phenomena has become priority of society sustainable development. Scientific knowledge is necessary for systematic knowledge of phenomena in the environment, and practice for checking their usability.

Scientific findings do not always come to those who perform security tasks, such as individuals or legal entities. Therefore, there is a need for scientists and experts to meet and exchange ideas, opinions and knowledge. Materialization of knowledge is carried out daily in the process of modern business. Exposed to the impacts of a turbulent environment, and focused on sustainability, modern business requires permanent monitoring of changes and adaptation to these changes.

Comprehension of the environment in which the modern society exist, is possible if there is the necessary knowledge of the phenomena that characterize it. That knowledge provides an opportunity of preventive action through an efficient risk assessment system. Only knowledge, formed as a symbiosis of science and profession, has quality and strength, which guarantees the possibility of preventive action and an optimal level of readiness to react to negative events. The resistance of contemporary society to negative events depends on the degree of knowledge development.

The danger of the Covid-19 virus represents a serious danger this year as well. Uncertainty regarding the development of the epidemic and the method of protection, determined the organizing committee to make a decision not to have a physical gathering. The Organizing Committee is determined to maximize compliance with measures to protect against the spread of the epidemic. We believe that in this way we are contributing to the reduction of infection. Having in mind the real situation regarding the epidemic, the organizing committee made the decision to realize the forum by publishing a collection of papers and posting the author's presentations on the website www.bekmen.rs (only at the request of the author). In addition to the conference, other planned contents of the forum will not be organized.

Proceedings from the 7th International Conference - Security and Crisis Management - Theory and Practice, presents a new value in the observation of a portfolio of security phenomena at the strategic, company, and individual level. The papers published in the proceedings are new findings and views of the author. A wide range of issues, confirms the assumption of the necessity of such a conference. The papers presented at the last sixth conferences have unambiguously demonstrated the need for regional cooperation and the harmonization of joint capacities.

The proceedings represent a review of existing knowledge, a source of new knowledge, assistance to researchers and practitioners in solving security problems, a support for those who practically deal with security and a source of initiative to improve existing knowledge in the field of security, management and engineering.

We hereby invite all interested scientists and professionals to improve the quality of future publications with their work.
